

COVID-19 information can be found at <https://www.coronavirus.vic.gov.au>

Below are the latest quarterly key statistics for emergency care in Victoria.

The COVID-19 pandemic has had significant, enduring effects on both the volume and type of demands placed upon hospitals both from a patient perspective as well as overall operating environment. As such, care needs to be taken when assessing results and comparing to prior periods.

Percentage of patients treated  
within recommended time

**71**

per cent

Median waiting time for all  
patients

**15**

minutes

Percentage of patients staying 4  
hours or less

**52.9**

per cent

**63.1**

per cent
