Special Commission of Inquiry into Healthcare Funding

Before: The Commissioner, Mr Richard Beasley SC

At Level 2, 121 Macquarie Street, Sydney, New South Wales

Tuesday, 28 November 2023 at 10.00am

(Day 002)

Mr Ross Glover (Counsel Assisting)
Dr Tamsin Waterhouse (Counsel Assisting)

Also present:

Mr Richard Cheney SC with Mr Hilbert Chiu for NSW Health

THE COMMISSIONER: Good morning. Yes, Mr Glover. 1 2 3 MR GLOVER: Thank you, Commissioner. 4 5 This morning, and during the course of today we have, as Mr Muston flagged yesterday, evidence from Dr Lyons, 6 7 Dr Chant and Ms Willcox. They will be appearing as a panel. We might have them sworn or affirmed and then 8 9 we'll go from there. 10 <NIGEL JOSEPH LYONS, sworn:</pre> [10.01am] 11 12 <KERRY CHANT, affirmed:</pre> [10 .01am] 13 14 15 <DEBORAH WILLCOX, affirmed:</pre> [10.01am] 16 17 MR GLOVER: Dr Lyons, if I can start with you, could you state your full name, please. 18 19 20 DR LYONS: Nigel Joseph Lyons. 21 22 MR GLOVER: You are currently a specialist adviser to the 23 office of the secretary for the ministry of health? 24 25 DR LYONS: That's correct. 26 27 MR GLOVER: What are your responsibilities in that role? 28 29 DR LYONS: I've been contracted to provide support for the Special Commission of Inquiry but also to undertake 30 a number of activities that are of strategic interest for 31 the secretary, so I've been involved in establishing the 32 Health System Advisory Council, which I think we'll hear a 33 little bit more about probably during these hearings, which 34 35 is around giving clinicians a greater voice in the ministry, and most recently have been involved in looking 36 at how we can free up clinicians at the frontline from some 37 of the administrative tasks that are taking them away from 38 39 patient care, so it's a project called "Time to Care". 40 MR GLOVER: And you've been in that role since September 41 2022? 42 43

. 28/11/2023 (002) 65 DR LYONS/DR CHANT/MS WILLCOX

Transcript produced by Epig

health systems, strategy and planning, from October 2016?

And prior to that you were deputy secretary

DR LYONS:

MR GLOVER:

44 45

46 47 Correct.

1 2 DR LYONS: That's correct. 3 MR GLOVER: Prior to that, you were the chief executive of 4 the Agency for Clinical Innovation? 5 6 7 DR LYONS: That's correct. 8 All right. Dr Chant, if I can come to you. MR GLOVER: 9 10 DR CHANT: Yes. 11 12 MR GLOVER: You are currently the chief health officer 13 and deputy secretary population and public health? 14 15 DR CHANT: That's correct. 16 17 MR GLOVER: You've been in that role since about April 18 19 2009? 20 21 DR CHANT: That's correct. 22 23 MR GLOVER: In general terms what are your responsibilities in these roles? 24 25 I have portfolio responsibility for dental, 26 DR CHANT: drug and alcohol, up until recently Aboriginal health, and 27 28 also the Centre for Epidemiology and Evidence, so 29 surveillance systems, data systems, data linkage capabilities. 30 31 32 I also have broad roles within the health protection remit, environmental health, immunisation and protection of 33 communicable diseases. 34 35 36 We also have the population health programs areas which particularly focus on tobacco, obesity and other, 37 most recently, an emphasis on e-cigarettes. 38 39 40 MR GLOVER: We might explore some of those areas during the course of the day. 41 42 43 Ms Willcox, if I can come to you. Your substantive role is deputy secretary health systems strategy and 44 45 patient experience; is that right? 46 47 MS WILLCOX: That's correct.

1 2 I understand you are currently the acting 3 secretary; is that right? 4 MS WILLCOX: 5 That's correct. 6 7 MR GLOVER: And you have been in that role since September 2022? 8 9 MS WILLCOX: Yes. 10 11 MR GLOVER: 12 Prior to that you were chief executive of the Northern Sydney Local Health District; is that right? 13 14 MS WILLCOX: 15 That's correct. 16 17 MR GLOVER: Each of you have - I will have to do this one at a time, so I will go back in reverse order. 18 Ms Willcox, 19 you have participated in the preparation of a joint report for the purpose of these hearings? 20 21 22 MS WILLCOX: I have indeed, thank you. 23 MR GLOVER: That's the document at [MOH.9999.0001.0001] 24 25 I'll just have that brought up on the screen. The matters that are expressed in it reflect your views, do they? 26 27 28 MS WILLCOX: Yes, they do. 29 Dr Chant? 30 MR GLOVER: 31 32 DR CHANT: Yes, they do. 33 34 MR GLOVER: Dr Lyons? 35 36 DR LYONS: They do. 37 Commissioner, I propose to tender the report 38 MR GLOVER: 39 at the moment, and if convenient, to do a bulk tender of Some of those documents are 40 a number of documents. Some of them are what I will 41 referred to in the report. call foundational documents that were referred to in 42 43 opening yesterday. 44 We've done it by way of list. If I can hand two

.28/11/2023 (002)

45

46

47

I propose to tender,

copies, one, a working copy, for you.

if it is convenient each of those --

THE COMMISSIONER: I should say, I can obviously still stand but my hearing is not - I don't know whether it is the acoustics in here, which I think are pretty dodgy, but you will all need to keep your voices up for me to hear, thanks.

Does that report need to be given a number now?

MR GLOVER: Yes, notionally on the list, Commissioner, you'll see we have applied exhibit numbers for all of them and the report is --

THE COMMISSIONER: I see. It is already exhibit A1.

MR GLOVER: A1. The way we propose to handle tenders throughout the hearings is to do them by reference to the hearing block. This being the first, it is A. The next will be B and so on, if convenient.

THE COMMISSIONER: All right.

EXHIBIT #A1 JOINT REPORT OF DR LYONS, DR CHANT AND MS WILLCOX [MOH.9999.0001.0001]

MR GLOVER: For the purposes of giving your evidence, I understand that between you, you have arranged for one of you to be the lead for particular topics.

What I propose to do is direct the questions on those topics to the nominated lead, but I'm interested to hear from all of you, so if, at any stage, any of you wish to add to an answer that has been given, in case I forget to ask, please feel free to do so.

Dr Lyons, we're going to start with you and we're going to start with the topic under question 2 of the report, that starts at paragraph 33 and following.

In paragraph 34, reference is made to the need to balance:

... efficiencies which may be gained from centralised delivery and governance against the need for local management responsive to the varying needs of [the] different communities.

Do you have that passage?

3 4

DR LYONS: I do, indeed.

5

MR GLOVER: Can you just explain to me what is the balance and why is it an important one to be struck?

7 8 9

10

11 12

13

14 15

16

17

18 19

20

21 22 DR LYONS: Certainly. I think the balance here refers to a range of factors. The first of those is that under the devolved governance arrangements, where we have local health districts being responsible for providing the services for their local community and population, we have the ministry, which is the role as system manager but providing a whole range of support functions for the whole of the system. It's about where we decide the balance needs to be in relation to either a service that's provided or a decision that needs to be made in relation to service delivery, or in relation to how the services are And so there is always a balance to be struck configured. around those, depending on what the service is or what the issue is as to where the best place for that decision to be made is.

232425

26 27

28

Under our arrangements, that balance is struck with the centre deciding on policy, overarching funding and strategy, overarching system planning, and also providing those support services on a statewide basis that we can reference, but there are a number of them.

293031

32

33

34

35

36

37

38

39

40

41

Then at the local health district level it is around having that focus on delivering the services through the hospitals and community health services that the local health district is responsible for; making decisions that put policy into practice at the local level, that distribute the resources that are provided to the local health district in a way that gets the best service delivery for the local community across the range of different services; and providing support for clinicians who are delivering those services locally as well as involving the community as much as possible and consumers in decisions around the services that they receive.

42 43 44

MR GLOVER: Why is it important for matters of the kind you have just been describing to be dealt with at the local level rather than the central level?

46 47

DR LYONS: We have found that over the years - and we've been through various governance arrangements in New South Wales with things more centralised and then decentralised in terms of decision-making - there is a strong sense from our communities and consumers of health care, and from our clinicians and staff, that decisions that are made as close as possible to where patients receive their care or where communities receive a service are seen to be better decisions because people can be involved in those decisions, can understand them, be involved in processes that support the decision-making, and understand who is making the decision again, and can ask why.

When the decision is made a long way away, that is more difficult to achieve, and so for those matters that are directly relevant to service provision and care, having those decisions being made locally is a better outcome in terms of that communication, support and engagement with the community and clinicians involved.

MR GLOVER: Ms Willcox, did you wish to add anything to Dr Lyons' answer?

MS WILLCOX: No. I think Dr Lyons has summarised it well.

MR GLOVER: Dr Chant?

DR CHANT: I suppose just to say that also the greater understanding of the service configuration locally, the relationship to other service providers, is held locally, and for much of our care, it is around how we work in partnership with those other service providers, be that primary care, aged care sector or other non-government organisations.

MR GLOVER: We'll definitely come back to that later in the morning.

Below paragraph 34, Dr Lyons, there is an organisational chart and we'll get into the pillars and the statewide services, et cetera, in a moment, but just in terms of the specialist networks, can you just briefly explain the two specialist networks and how they operate within the wider system?

DR LYONS: Sure. So the two specialist networks are not geographically based but have functions that are very

important to the state. So the Sydney Children's Hospital's Network is the configuration of the children's hospitals at Randwick and Westmead. They provide the highly specialised paediatric services that are required to support care of children, and that's connected through the children's services and all the other local health districts, but all those higher levels of care are provided through the Sydney Children's Hospital's Network at those two hospitals and their associated services.

And Justice Health and Forensic Mental Health Network has the responsibility of providing care for people who are in custody across the state in prisons and also has responsibility for forensic mental health and the care of people who are in that system as well, in terms of their mental health and physical health, and that is a statewide service as well.

MR GLOVER: I take it that they're structured in that way because services of those kinds are better delivered on a statewide rather than local basis; is that right?

DR LYONS: That's correct, and they are highly specialised and concentrated, so that's why they are configured that way.

MR GLOVER: If we can have document [SCI.0001.0042.0001] displayed on the screen.

Commissioner, this is in volume 6 at tab A46 of the hard copy tender bundle.

This is the ministry of health organisation chart. I just want to get a brief description of each of the divisions, Dr Chant, we heard from yours.

I might ask you, Ms Willcox, to do this, given your current role as acting secretary. If you wouldn't mind just giving us a brief overview of each of the divisions within the structure and what their responsibilities are, please.

 MS WILLCOX: Certainly. Kerry has outlined her role as chief health officer. The deputy secretary financial services and asset management and chief financial officer, Mr Alfa D'Amato, is responsible for the oversight of the budget and funding systems and processes across the entire

system. The areas around asset management go to issues around all the capital and equipment that are used in the health system and how they are managed in the accounting sense, so that is the remit of the chief financial officer.

Mr Minns is deputy secretary, people, culture and governance. Mr Minns is responsible for industrial relations policy, workforce policy, organisational, talent development, and learning and workforce culture and development issues, statewide training and the like.

The deputy secretary systems, sustainability and performance, Mr Matthew Daly, oversees some of the key access areas around emergency departments, elective surgery, importantly has remit of sustainability in the system, looking at climate change and the impacts on the system, and has an analytics and data function and the chief custodian of data for NSW Health.

 Deputy secretary regional health, Mr Luke Sloane, recently appointed to oversee and support and coordinate health service delivery in our rural, regional and remote local health districts to give a greater emphasis to the policy and service issues that are relevant to those communities who have quite different health service settings and needs to our metropolitan --

MR GLOVER: Just before you go on, is that a relatively recent addition to the structure?

MS WILLCOX: Yes, that is, just in the last month, that appointment. Mr Sloane held the role of the regional health coordinator. That role has been in place, I would have to double-check, but it's more than a year, but just recently the title has been changed to deputy secretary.

MR GLOVER: And I take it that elevating it to deputy secretary reflects the significance of the role within the organisation?

 MS WILLCOX: Yes. No doubt you will be aware of a rural health inquiry that was held with a suite of recommendations and one of them was about giving profile within the ministry to the needs of rural, regional and remote communities, and so Mr Sloane's position is being created in that regard. He has travelled to around, I don't know, over 100 facilities across the state, meeting

with communities and clinicians so we can strengthen our understanding of the needs and ensure that our policy and strategy response is in alignment with what we are hearing.

MR GLOVER: Please continue.

MS WILLCOX: Deputy secretary clinical innovation and research and chief executive, Agency for Clinical Innovation, Dr Jean-Frederic Levesque - this too is a relatively recent deputy secretary position. The intent of this one is to oversee medical research and innovation within the New South Wales health system. There is an Office for Health and Medical Research that reports in to Dr Levesque.

The aim of this role is to again increase profile connectivity with clinicians and researchers and the academic partners across the system so that New South Wales can strengthen its research activities and its dominant place in this regard, in clinical trials innovation.

The Agency for Clinical Innovation has been a longstanding part of the health system, that Dr Levesque was the chief executive, and that involves - largely works with clinicians that work on refreshing models of care and guidance around clinical variation, and those two positions have come together under his leadership.

The state health services functional area coordinator, Mr Wayne Jones, that position has been created in response to our response to COVID, looking at our disaster and emergency preparedness and how we can take the learnings from COVID to strengthen our response, along with the other emergency disaster impacts that occur, unfortunately, from time to time, such as floods.

MR GLOVER: Dr Chant, I think you said in an answer earlier that Aboriginal health used to be within your division.

DR CHANT: Yes. So just recently Aboriginal health was in my division, but in recognition of the importance of that, now there is a direct report of the Centre for Aboriginal Health to the secretary, and that reflects the emphasis that we, as leaders of the health system, want to see Aboriginal health placed.

MR GLOVER: What role does that centre have?

 DR CHANT: That centre provides a coordination. We really want to embed the concerns around Aboriginal health and addressing health differences or inequalities in health between Aboriginal and non-Aboriginal people across all our program areas. The centre provides a coordination mechanism, it provides advice, leadership at a state level.

MR GLOVER: Thank you.

Dr Lyons, if you can just have a look at paragraph 36 of the report. There you describe the role of the ministry for health as "system manager". By that, is that a reference to the role of the ministry that you described in perhaps your first answer today around policy, strategy and those centralised matters?

 DR LYONS: It is but it goes beyond that. It has a particular reference in the context of the National Health Reform Agreement as well, in that the states and territories are the system managers for the services in each of their jurisdictions, so they have overarching responsibility for the delivery of services through all of the different health services within the states and territories.

As system manager, we're responsible for ensuring that we deliver on the requirements of National Health Reform Agreement but also support that effective delivery through the local health district. That is done through a range of different processes, part of which is the service agreements which are struck between the ministry and each of the local health districts, which define what will be delivered by the local health district, what will be delivered centrally, and the relationship between both the centre and the district.

Also, the performance levels that are required in terms of levels of service delivery and the sorts of performance indicators that will be used to measure whether or not the districts are effectively delivering within the service agreement arrangements.

MR GLOVER: That's done through the service agreements and the performance framework, is it?

DR LYONS: That's correct.

MR GLOVER: We'll come back to that later today.

Also in paragraph 36 there's reference to public hospitals, but also community health and other public health services. What is within the description of "community health and other public health services"?

DR LYONS: I think within New South Wales, historically, our local health districts, area health services in the past, have had responsibility not just for the hospitals and the services that they provide but for a range of services that are delivered in to the community through community health and through other services like our community mental health, through arrangements with non-government organisations in relation to delivering certain types of services through the non-government organisations as well.

 These are usually more outside of the hospital walls and are around how we provide supports to keep people well and healthy within a setting in the community, and that can be delivered through child and family nurses; through aged care; through community nurses who would be out providing support for people who have conditions that need ongoing treatment for a period of time; through our community mental health teams. So there are a range of different services that exist and are operating in the community alongside other community services, including primary care, which is delivered outside of NSW Health. So those are very important distinctions.

Some other states and territories are focused around hospitals, but we are much broader in terms of the services that our local health districts are responsible for.

MR GLOVER: Thank you.

DR LYONS: That would include drug and alcohol and other services as well. There are a range of different services - dental which is also a very important service that we are responsible for at the local level.

 MR GLOVER: In paragraph 37, reference is made to the ministry guiding the development of services and investments in the New South Wales public health system.

How does it go about doing that?

DR LYONS: It goes about it in a range of different ways but primarily through the development of policy, the development of centralised planning approaches and the reflection of those into the arrangements we have with the service providers, usually communicated through the annual service agreement.

But if I give you an example, we have a 10-year future health strategy, which has clearly defined the directions that we want to see in the New South Wales health system for the next 10 years. That has guiding, overarching strategies and objectives that will then flow through into plans but also will flow through into the arrangements we strike with all of the service providers, whether that's the central agencies and the pillars, the statewide services, or whether that's through the local health districts. What we look at is how we take that plan and deliver it in terms of the actions and activities that we want each part of the system to play and how we ensure that we do achieve those directions through the arrangements in the service agreements or the things that we purchase or supply. That's one way.

 Then the other is reflecting it in policy and strategy, which will be reflected through the different divisions that the ministry has responsibility for and ensuring that those are then reflected in the activities that are undertaken through the system.

MR GLOVER: How does the ministry take into account what's happening on the ground, if I can call it that, in the districts in that process?

 DR LYONS: A really important point. To take as an example, even in the development of our future health strategy, which is a 10-year strategic plan, we were heavily involved in consulting with our local health districts and partners, and even through to consumers directly, and clinicians directly, to ensure that we were able to feed in the issues as they saw them, as well as the things that were driving the need for change at a system level and bringing the two together to ensure that the strategy we came up with was informed by people who were involved in delivering care and receiving care, as well as for people who are responsible for policy, strategy and

ensuring that the government priorities are delivered on.

MR GLOVER: Dr Chant do you wish to add anything to that?

DR CHANT: No, I think that Dr Lyons has covered it. I suppose just one component was we also do monitor data, so we use data to inform where there might be gaps in service provision, we look at variations in access and uptake and outcomes, and so a lot of the planning is also informed by changes in the demographics of the population. So the data assets that we have at a statewide level inform some of that local - clinical services plans and the local decision-making.

MR GLOVER: Ms Willcox?

 MS WILLCOX: Dr Chant covered off on the planning component I was going to mention, but in addition, there are clinical councils that are in our hospitals and at the district level who connect with the executive teams and can raise issues that they think are relevant to their community and their service needs, and that's a frequent pathway for identification of change or new models of care or innovation that might be required at a local health district and that may equally be required across a number of districts or, in fact, become statewide.

MR GLOVER: Are they the clinical councils that flow from the model by-laws for example?

MS WILLCOX: There are medical staff councils that are part of the by-laws and an executive medical staff council that sits, which are the chairs of each of the medical staff councils of the hospitals that sit on that with the chief executive and other members of the district executive team. But the clinical councils are broader than our medical colleagues; they include nursing and allied health and local management.

MR GLOVER: Thank you.

 One aspect of the system which isn't in the structural diagram are the affiliated health organisations. We might just bring up the list so those who are following online can know what we're talking about. [SCI.0002.0004.0001] at pages 125 and 126. This is schedule 3 to the Health Services Act which lists the affiliated organisations. If

we just scroll down, that's the introduction, and then over the page, please, and there's the list.

I don't need to go through the list, Dr Lyons, but just in general terms, how do the affiliated health organisations plug into the system?

 DR LYONS: Very, very closely, is the answer. For all intents and purposes, they are providing the same types of services as our publicly funded health services. They are affiliated under the old schedule 3, due to the fact that they were historically run by and owned by charitable organisations, and have a very important role in health service delivery locally. So that when the state resumed responsibility for providing services for public hospitals, those relationships were enshrined in the Act.

 Those services usually have a very close relationship with the local health district, except for St Vincent's, which is its own local health district network in its own right, given its role and important role with some very highly specialised services that it operates. But those services are undertaken with the local health district working in partnership to ensure that those affiliated healthcare organisations receive resources that they need to deliver those services and that there's highly integrated care between what they do and what's provided through the other services in the local health district.

 MR GLOVER: When you say they work in partnership, is it the responsibility of the health district to, effectively, manage and monitor the services being provided by the affiliated health organisations?

DR LYONS: That's correct. So in the structures that exist within the local health districts, they will ensure that the people who are operating those affiliated healthcare organisations are a part of the discussions, as are the management of the other hospitals in the local health district or other services, to ensure that there is a good connection between how those services are delivered at the local level.

MR GLOVER: We'll come back to funding later, but in general terms, how are those organisations funded for the services that they do provide?

DR LYONS: It's the position of the ministry that they should be treated in exactly the same way as the other facilities within the local health district - they should receive similar funding for the similar services that are provided, and that any access to activity based funding that relates to service provision should flow through to those hospitals the same as it does for the other hospitals in the local health district.

MR GLOVER: When you say "it's the position of the ministry", does that mean it doesn't always work that way?

DR LYONS: We do hear from time to time at the centre that there may be an issue with an affiliated healthcare organisation not receiving resources they believe they should have received, and that advocacy can occur up through the district or through the Health Services Association, which is, I think, the peak group of the affiliated healthcare organisations in the state, and we are always very receptive to addressing those issues when they are asked.

MR GLOVER: Are there, for want of a better term, services type agreements between the local health districts and the affiliated health organisation in their region?

DR LYONS: There should be formal agreements around the service level that is provided, that is consistent with the service agreements we strike with the local health district to reflect those and to have similar levels of performance required for the resources that they receive in delivering those, yes.

MR GLOVER: You mentioned that St Vincent's was slightly different. In what way?

 DR LYONS: It is considered to be a local health district in its own right from the point of view of the way we interact with St Vincent's. So the chief executive of St Vincent's is considered the same as the chief executives of all the other local health districts and we would strike an agreement with St Vincent's which is direct from the ministry through our service agreements with them directly, rather than through another local health district entity.

MR GLOVER: Why have they been treated as that network?

DR LYONS: I think historically - and there was a governance review around 2011 and I think there had been some issues with St Vincent's feeling that the resources they were receiving for the role they played, while they were embedded within an area health service, wasn't a satisfactory arrangement, so for the purposes of ensuring that there were direct relationships with the centre, they were pulled out and created as a local health district in their own right, so there was that direct relationship with the ministry.

MR GLOVER: Ms Willcox?

 MS WILLCOX: I would probably add an example to exemplify how we operate with our AHOs. The Royal Rehab service, for instance, has an arrangement with Northern Sydney Local Health District to provide care to spinal injury patients. Rural Rehab are designated in the service level agreement of Northern Sydney, so as a true service partner, and we would have regular performance meeting with the executive team at Royal Rehab, monitor activity and manage any issues that were emergent. So it is a very true and real partnership.

MR GLOVER: Dr Chant?

DR CHANT: No I think it has been adequately covered.

MR GLOVER: Back to the report, if that can be brought up on the screen, thanks, operator, and to paragraph 39.

This has been touched on already, Dr Lyons, but reference is made there to the LHDs and their boards being charged with responsibility for determining how they deliver their services, et cetera. Do I take it that, based on your earlier answer, that is a prime example of devolved responsibility and the LHDs have a high level of autonomy in doing that?

DR LYONS: It is. They have responsibility within the policy and strategy of NSW Health - so the future health strategy that I outlined earlier applies to all of the local health districts there. Their role is to translate those directions, that strategy and those directions, to what that means in terms of the local health district's own strategic direction and its clinical service plans.

So at the local level, they will look at what the state is saying needs to be delivered and where the state is heading with its health services, and think about what that means for the way they are currently operating and what needs to change to reflect that, and they will develop their own strategy and their own clinical service plans, which should reflect the directions that have been outlined in the statewide strategic plans.

MR GLOVER: Although they're developed at the local level, is there any statewide, or perhaps lesser regional coordination, to ensure that the needs of the population that may straddle areas are being fully met?

DR LYONS: We have responsibility for services that are So there are a range of above local health districts. services that are not provided just within a local health district, because they might be more highly specialised and need to be concentrated in a lesser number of sites, for We call those supra local health district instance. They're usually highly specialised and there's services. usually an arrangement struck with the hosts of those services, so the local health district that is hosting that service will have in its service agreement a recognition that they are providing a statewide or supra LHD service, and reflected in their agreement that that is for residents that are outside of their local health district.

 There are examples of things like burns, which is provided in one or two sites across the state; spinal cord injury that Ms Willcox just mentioned is actually provided only on a couple of sites in the state. These are highly specialised services, so there is a concentration of expertise around those. But there are other examples.

For treatment of stroke, we have a statewide stroke service. It's hosted out of Prince of Wales Hospital but there are a number of sites that provide endovascular clot retrieval, which is a very highly specialised treatment where we're able to have interventional specialists put a catheter up into the vessels in the brain and extract clots for some people who have appropriate strokes.

 So those are concentrated to only three or four sites across the state, so there are arrangements for networking of services for access for residents anywhere from across the state into those services, and it's reflected in the

agreements and the resources that are provided and deployed that those districts have responsibility to provide that service on a statewide basis.

MR GLOVER: For those highly specialised services, why are they concentrated to one, two or three sites?

DR LYONS: For a range of factors. The primary driver of those, though, is that there are small numbers of those procedures done proportionally and there is a need to concentrate, usually highly specialised skills, in a site that enables that service to be available 24/7, 365 days a year. It wouldn't be possible to replicate that service over a number of sites, and nor would it be appropriate to try and provide it and maintain quality services, when there's only a few of those cases likely to be appearing at a site if it was devolved out.

 It's better to concentrate - there's a lot of evidence in the literature around a volume outcome relationship where, for those highly specialised procedures, you concentrate the volume into one or two sites and you get better clinical outcomes because people do more of those procedures, the team around them and supporting them do more of those procedures, so they are able to provide the highest quality care.

MR GLOVER: Dr Chant, did you wish to add anything to that answer?

DR CHANT: Probably just a reflection that we do look at access and equity across the state in terms of who is using those services that are procured on a statewide basis, and if there are services that span multiple districts, we do attend to the fact that we do look at which populations are accessing those services for that sort of equity and discussions across the districts.

MR GLOVER: The terms "access" and "equity" are referred to in a number of places in the report, so what do you mean by those terms when you use them?

 DR CHANT: Look, I think when I'm using the term "access", I mean that the services are able to be accessed, and that doesn't just mean the services being there - the services being culturally competent, people feeling comfortable to use the services. So I use "access" in a more global term

than just the presence or absence of the services.

The issue of equity, I think you'll see a theme in the report where we do highlight that we acknowledge that some community members, for a variety of reasons, have more difficulty accessing our system, and we were happy to explore that further, but it's probably a very big discussion, which is what are the drivers for that inequity?

But clearly, we do take that view that we want to, as a system, address those inequities, and that would be about addressing access, but it will also be broader work in a more whole of government to support and address those essential determinants of health.

MR GLOVER: We'll explore that a little bit further during the course of the evidence, but in terms of addressing equity challenge, does it require targeted responses depending on where the particular segment of the population is?

DR CHANT: Look, it requires - it's a really complex system and to tackle equity requires action at all levels. So I've just described the fact that we do look at data and see the differential uptake of the data, but we also need to map that with the underlying need of the population. So for some population groups, we would actually expect them to have fourfold or tenfold greater presentations because of their underlying health need.

So in those circumstances, we would expect to see very high levels of hospitalisation high levels of access to our services commensurate with their need. It's a big discussion about equity but happy to drill down.

DR LYONS: Could I expand on that?

MR GLOVER: Yes.

DR LYONS: It goes the other way as well, which is we also need to be conscious of the fact that we don't provide all services for all people. In fact, some people are able to access services through other means, whether they have private health insurance or the ability to pay for that service outside of the services we offer.

Our job is to be the safety net for all of the community, but there are, of course, many people who can access health care through other means. It is then a balancing act of ensuring that we're providing the appropriate resources in the right places to adjust for that, and that's an important factor that we constantly monitor as well, because of the intersection between our services and other service sectors. So primary care, specialist care in private hospitals, aged care - all of those have impacts and we need to be constantly monitoring those impacts on our services.

DR CHANT: I suppose just to take it back one step, what we are wanting to do is have the same outcomes. For the same underlying health need, we want the same outcomes and we know that the approach will have to be different to achieve that. But that's ultimately what equity we want.

MR GLOVER: Thank you.

Ms Willcox?

MS WILLCOX: Just in terms of the statewide approach to planning in your original question, apart from what would be the supra LHD services that Dr Lyons talked about, we also have policy frameworks at a ministry level, for instance, for multicultural health or youth health that give a framework to the LHDs around the considerations when planning services for your local community. We have some statewide demographic data that would support providing the types of services or models of care that might be appropriate. But that information then is for the local health district to configure and provide in accordance with their local needs and their own local planning and data information so the two come together.

 MR GLOVER: Paragraph 41 of the report, Dr Lyons, we see reference to the Health System Advisory Council that you mentioned earlier. I take it that is a relatively recent innovation, if I can call it?

 DR LYONS: It is. It has come about, I think, as a result of our experience during the pandemic, actually, where, in response to some of the challenge we faced in response to meeting the needs of our services, we established a COVID clinical council, which meant we had a direct voice from frontline clinicians who were dealing with caring for

patients in that context, and felt the value of that voice directly to the ministry which hadn't been present previously.

The secretary and the minister are both very supportive of establishing a central clinical voice, multidisciplinary, so it's doctors, nurses, allied health, some local management, people who are working in oral health, as well as our other clinical services. They've now come together with defined terms of reference and are meeting - they've met three or four times now - and will be continuing to support us with advice around the sorts of things that will be very important for the system, not just now but into the future.

MR GLOVER: How does that advice feed in to overall planning at the ministry level?

DR LYONS: As I said, it's early days, but it's going to be really critical that we establish effective pathways. The deputy secretaries from all of the divisions in the ministry are a part of the Health System Advisory Council, as is the secretary. They are part of the discussions that are being held and will hear directly from the clinicians around how they see particular issues that might be brought before the council and the advice that they would want to provide around how the ministry could best support any changes in service delivery, introductions of new treatments.

We had a good discussion at the last meeting around the impact of artificial intelligence on health service delivery. So that will then inform the policy position we take and the priorities around how we start to introduce that type of change into the system.

MR GLOVER: So is it intended to function that this group will take issues up to ministry level or that it will provide advice on issues coming down or a two-way exchange?

DR LYONS: Two-way. So it is our view that the ministry will have issues that they would like to seek advice from the Health System Advisory Council about; equally, we want to hear issues that are confronting our clinicians at the front line, and this is an opportunity for them to have a direct voice to the ministry on those matters.

MR GLOVER: At paragraph 43 of the report, reference is made to the by-laws and some of the structures that are put Ms Willcox, I think we had an exchange about some of them earlier.

4 5 6

1 2

3

Yes. MS WILLCOX:

7 8

MR GLOVER: Could I just ask you to explain in brief terms each of those structures and their role in the system?

9 10 11

12

13

14 15

16

MS WILLCOX: Certainly. The medical staff executive councils, as I mentioned, sit at the district level and they are comprised of the chairs of each of the medical staff councils that are in the hospitals and services, and would have members of the - usually the chief executive and members of the executive district team would be a part of that meeting.

17 18 19

20

21

22 23

Medical staff councils are local medical staff Medical practitioners from across the variety of departments belong to a medical staff council, meet around monthly, have minutes that would be shared with the hospital executive from time to time to help resolve issues.

24 25 26

27

28

29

30 31

The mental health medical staff council, or an approved alternative engagement mechanism, is a relatively new medical staff council to bring our mental health practitioners closer in. There's a number of other mechanisms that some LHDs have, so we didn't want to say "Dispense with that one and create this one", hence the statement around "approved alternative".

32 33 34

35

36

37

38 39

40

41

Local health district/specialty health network clinical councils - again, district level roles would have representation from all disciplines and sit with the district executive or network executive. There would be a monthly meeting or two-monthly, with a structured agenda, performance reporting, topical issues, quality and safety, and things that the executive wanted to bring forward to get guidance, and certainly for the clinicians to bring forward those issues they're looking for support on.

42 43 44

45

46 47

The hospital clinical councils are a subset of that They are at each of the hospitals and again would have hospital executive teams on that and be representatives from all disciplines in the hospital, and it tends to follow, so that members or the lead on the hospital clinical council would be the representative on the district-wide clinical council, so there's a connection of information to and from the local group through to the district group and back.

MR GLOVER: Paragraph 44, Dr Lyons, reference is made to the need to create a "patient-centred, effective and equitable healthcare systems". What does that mean?

DR LYONS: A very laudable aim. It means that when we are making decisions around how we should provide health care, we should involve patients, carers and families in the design of those services to ensure that they meet their needs. This is an ever-challenging area of focus. I mean, historically, there has not been as much involvement of patients, carers and families in deciding how services would be delivered, and increasingly, we are requiring a concept of co-design, which is having the consumer or patient voice very directly involved in decisions around how we should deliver that service, to ensure that it is actually going to meet the needs of the patient who will receive that care.

 We have tended in the past, I think historically, to be a little focused around how we think that care should be delivered, because we know how care should be delivered, but increasingly, we are seeing the importance of this in a whole range of areas, that patients should be directly involved in decisions around how that care is provided as well as being responsible with us for how those services are delivered.

MR GLOVER: Why is that important in care planning and delivery?

 DR LYONS: Because we can assume things about what we believe are best for patients, but unless we hear directly from them, we may not be meeting their needs, and so it's really important that we understand their needs and are ensuring that the services that we provide will be best set up to meet their needs. We'll get better outcomes for the patients, there will be a better experience for the patients, there should actually be the better experience for the clinicians and teams involved in providing that care as well, because it will be meeting the needs of the patients, and there will be fewer concerns and complaints

from our patients around the service they receive because it will be designed to meet their needs in the first place.

MR GLOVER: One of the other benefits of that referred to in that paragraph is it drives greater innovation in healthcare delivery. How does it do that?

DR LYONS: I think innovation has a whole range of different contexts, but innovation at its core is around doing things differently that might reflect different circumstances, whether that's a growth in knowledge or technology that's available or a treatment that wasn't previously available, or it might be the context in which it's being delivered, the service is being delivered.

We see lots of innovation in our system, particularly where the system is challenged to provide a service and it looks for different ways to deliver that care, and so we see lots of innovative practice in the rural parts of our system, because there may not be the same levels of staffing or the types of staff available to do certain things. There are different ways found to provide that, and that's innovation, an example of innovation.

But having the patients, carers and families directly involved in that ensures that that innovation will be underpinned by the needs of those patients, no matter what the setting.

MR GLOVER: Ms Willcox, did you wish to expand on that?

MS WILLCOX: Yes, thank you very much. Dr Lyons's comments are very true, and I think the system has evolved considerably over the last decades. I mean, principally, our hospitals were designed for the staff that worked in them, as opposed to the patients and families that were coming into our care, and I think we're seeing a considerable shift in that regard.

 We've generated a document that's noted in paragraph 45, called "All of Us", and it's a toolkit, for want of a better term, to help our staff better connect with patients and consumers and carers and help to redesign and reconfigure how they go about their work. Dr Lyons's point about it giving greater satisfaction to our staff to be able to take the time and listen to patients and to build that rapport is a much more rewarding experience than

going from task to task, which is not what they are trained to do, nor do they intuitively want to do.

Just with the connection to the Health System Advisory Council, as noted in paragraph 46, we're in the process of developing a consumer council, which will be a statewide peak consumer group in parity with the Health System Advisory Council, so our consumers will be able to give input up to us, give us guidance, and similarly we can talk to them about those issues that we need them to work with us on.

MR GLOVER: Is that a body that is in development, if I can put it that way?

MS WILLCOX: Yes, in development currently. There are many models from around the world, different jurisdictions. I won't go through them all now, but there are many configurations. We want to explore all the evidence from other jurisdictions and we're working - obviously our consumers are co-producing this with us.

MR GLOVER: Dr Chant, did you have anything further?

DR CHANT: No, I think that has covered that.

 MR GLOVER: Dr Lyons, a couple of references have been made already to the services agreements, and we might just go to one by way of example. This is [SCI.0002.0013.0001]. For those working off hard copy, it is in volume 6 at tab A47. Hopefully, you can all see the screen. Dr Chant, there's a hard copy there.

DR CHANT: Thank you.

MR GLOVER: Volume 6, tab A47, Commissioner.

This is the "Service Agreement 2022-23" between the secretary and the Northern Sydney Local Health District, by way of example.

As a general matter, do they take a similar format across the districts?

DR LYONS: They do.

MR GLOVER: If I can just start on page 6 - Commissioner,

I'm going to use the coded page numbers for the operator to put it on the screen, so the top of the page.

THE COMMISSIONER: Got it.

MR GLOVER: Reference is made there in paragraph 2.1 to the "Future Health Strategic Framework". Is it against that framework that the key performance indicators are set?

DR LYONS: It is. It's a work in evolution, because the future health strategy has only recently been adopted, and so what we are doing is translating all of those key performance indicators to reflect the strategic objectives. Now, that's a process that is being worked through, so I'm not sure it's as complete, yet, as it can be, but it is a commitment that the strategic objectives and the future health should drive what is actually being delivered and how the services will be held to account. So the alignment is very important.

MR GLOVER: Is that to ensure that across the state, although they are dealing with local issues, the system is pulling in one direction, if I can put it that way?

DR LYONS: Absolutely. Absolutely. That's the purpose of it all and I think it has created that structure and the processes around it to support that being a very disciplined approach across the whole of the system. It is one of the strengths, I believe, of the New South Wales health system in regards to the centre being strong around those things, the services at the local level understanding their context and doing the things that are needed to be done, but that strong connection and alignment between where we need to go as a system as well as understand the local needs.

 MR GLOVER: If we go forward in that document to page 21, here we see the key performance indicators set out in more fulsome terms. Again, do I understand it that each of the service agreements look fairly similar in this regard?

DR LYONS: They do.

MR GLOVER: The first one refers to "Overall Patient Experience Index" and "Patient Engagement Index". What's within those measures?

DR LYONS: These are parts of the surveys that are done on a statewide basis that look at both the experience that patients report on receiving care in our services, and the engagement index is around whether they would recommend that service. It's another type of question, so it's around how they felt the experience was and whether or not they felt they were part of their care and would recommend it to others who were receiving care there. There are some definitions around that but they're both defined and they're part of a statewide survey which is consistently applied.

MR GLOVER: Do those measures take into account outcomes that those patients have received?

DR LYONS: Not so much clinical outcomes but experience, we believe, is a very important outcome, so we would hold experience and clinical outcome as very important components of the care that is delivered, and both should be measured to ensure that they are being delivered effectively within the reported needs of the patient.

MR GLOVER: How is clinical outcome measured at the moment?

 DR LYONS: That's the challenge. I think we are all challenged by clinical outcomes and we are working through how we define those clinical outcomes in a way that is meaningful for patients and for the clinical teams, and that varies depending on the type of care and the type of patient.

We have established through the Agency for Clinical Innovation, and are now looking to implement, measures, and we've got a system called the health outcomes and patient experience data collection system. Developed clinical systems around the world in developed countries are all struggling with how to measure outcomes in a way that is meaningful for patients and clinical teams but doesn't burden the clinical team or the patient with extra data to It is a real balance and getting the sweet spot collect. So we're looking at how we can do that effectively and do it in a way that is sustainable, and that gives us the right measures that are meaningful to clinical teams as well as to patients, carers and families, and that's a work in progress. There's lots more work to be done on that but we're well advanced in our thinking

around that.

 DR CHANT: Perhaps if I could just add a few components. In some domains we actually have very good outcomes. For instance, in the cancer remit, we monitor survival, five-year survival rates. We monitor - for many other program areas, we have very good outcome.

I think what Dr Lyons is reflecting is that the outcome data returning to the clinicians in an acute sense is more challenging, but certainly we do monitor as a health system how we're working in terms of mortality outcomes.

We also have sentinel events systems that pick up when things perhaps don't go well and there are opportunities for systems learnings. So there is a framework where we collect data. I think it is really in relation to the timeliness of that back to clinicians.

 We do measure a lot of process indicators as well, and we know that for many of our programs, there's such good strong evidence that if you do something, the outcome in a population level for that clinical cohort will be very good. So for many of our systems, we're also looking at how we embed those process measures, which are easier to capture, and return that information to clinicians in a more timely manner.

MR GLOVER: What would be an example of the process indicator that you've just described?

DR CHANT: So for process indicators, some of that would be things - I'll choose maternity as an example. We ask questions around have pregnant women taken iodine supplementation and folic acid; are women breastfeeding after delivery; immunisation, have they been immunised, we know that will often protect the baby, if we are talking about influenza and whooping cough vaccination. By knowing that we actually have those systems in place, we can actually be confident that we are supporting the mums and bubs to be healthy in that critical period.

 THE COMMISSIONER: Whose perspective is outcome judged from? It could be objective or subjective. Is it hard because great care can be provided but the patient doesn't feel as though the outcome was as good as they were

expecting from the particular procedure they had?

DR CHANT: That's the really valid question. There's the outcome from the clinician perspective and the outcome from the patient perspective and that's why it's important to measure both. But there would be shared indicators that people would value - for instance, cancer survival, disease-free intervals, not experiencing recurrent hospitalisations, you know, periods of hospitalisations, if you have chronic disease, if we have managed to maintain you at home. For some indicators there is a general alignment with what --

THE COMMISSIONER: Sure. If you have a complete cure and you were treated with respect, the clinician and the patient are going to think, "Fantastic outcome". But I suppose if you went in for a hip replacement and it was done perfectly but you thought you would be running within four weeks and running really quickly, the clinician and the patient might have different ideas.

DR LYONS: Commissioner, I think that's a really important point. Patient reported outcome measures are a very important component of the outcomes. They're not just the clinical outcomes as defined by the clinical teams; it's important that we understand and collect information around the patients' outcomes - what they're expecting from the treatment, first and foremost, and whether or not it actually meets their expectations after the event. So those are components of the data collection systems that I said we are starting to develop more fulsomely and are not yet available. But that's the direction we absolutely need to go.

In terms of the data that Dr Chant has been talking about, at the population level and in relation to large services, we have very good, hard measures around mortality and morbidity. What I was alluding to is probably more refined outcome measures that relates to the care received at an individual patient level and within a clinical team where it is really important for the clinical team to understand and be fed back the outcomes. We don't routinely do that for many of the things that we do.

 DR CHANT: Commissioner, I think you make a really valid point in the sense that what we would really want the system to be is much more shared transparent

decision-making, and for us, the fact that someone's expectations were different to what the clinical treating team - that's actually not good patient care. So we do need that very clear --

THE COMMISSIONER: That's a communication problem, maybe, yes.

DR CHANT: We really do want to see that sort of shared decision-making, clarity about options and choices and making sure the patients are fully informed about the range of options. We know, for instance, some other interventions, which are non-surgical interventions, can give people good outcomes and improved mobility. So all of the full range of options need to be discussed --

THE COMMISSIONER: Or just reduce pain, I imagine, too.

DR CHANT: Yes, reduce pain. So the full suite of options really needs to be discussed, and that's what we would see as patient-centred care.

 THE COMMISSIONER: This is obviously important to everyone in the health system, but the terms of reference keep talking about "best health outcomes", but it doesn't define what that term means, so we have to be sure we know what we're talking about. It's not an absolutely straightforward concept.

MS WILLCOX: Commissioner, if I could just add, in relation to the patient report experience measures and outcome measures that Dr Lyons referred to, they are gathered in real time, and they enable patient and clinician to have a discussion around what that experience or outcome looks or feels like, so it actually builds that communication and enables the clinician then to adapt what care or treatment they are providing to meet what the experience and outcomes noted by the patient are.

MR GLOVER: Just building from that, when you say "they are gathered in real time", how, in practice, does that happen?

 DR LYONS: I will give you an example. So we're moving to an online data collection system, so with validated tools that actually collect information that can be used objectively to measure the performance of that service and

look at things over time.

A lot of these are now online and the system we've developed is actually available for patients to put input into that system, either on a device in their own home in advance of the clinical consultation, or if they don't have access to those, in a clinical consult, before they see the team, paper-based or device-based. But then if it's on the system it can be used at the time of the consultation to have that discussion with the patient about the things that they're expecting to receive from the treatment, the outcomes they're looking for, what's important to them.

MR GLOVER: Then is there a step post treatment to gather further data from the patient?

 DR LYONS: It's ongoing. So for chronic conditions, it continues on over time, so that you can see and track over time whether or not the experience and the outcomes are improving through the treatments that are being received, and if they're not, then you can tailor the treatment to make sure it's starting to address the issues that the patient sees as important.

So I think it's an advance which we're very pleased that we're implementing. It now needs to be scaled up and used more widely.

MR GLOVER: And that's a process that will touch a great variety of patients from different backgrounds and different life experiences with different levels of health literacy. How does the system take that into account to ensure it's getting the best possible data?

DR LYONS: It's being done in a way that's using tools that have been used internationally and have been validated as being appropriate questions and applied in the contexts that we're delivering them. I think that will be a process of continual refinement, based on our experience and feedback from our patients as well.

MR GLOVER: How long has this system been up and running?

DR LYONS: Two or three years, I think it has been in place, and we've piloted it in a range of different clinical services.

Ms Willcox will be aware because, one of the services we piloted it in was in Northern Sydney, in musculoskeletal, I think, but it is not widespread yet, so it has to be scaled up and broadened in terms of its application.

MR GLOVER: I see. So this isn't a system-wide process?

DR LYONS: Not yet, not yet.

MR GLOVER: Recognising from the answers that have been given in this last little passage the difficulty in measuring clinical outcomes, how, if at all, are those clinical outcomes taken into account in performance management and KPIs for LHDs and specialty health networks?

DR LYONS: I think there's probably more of a focus on process measures, to be fair at the moment. I think that would be where the focus is, on the basis that if those care processes are in place and delivered effectively, the outcomes will be positive.

But we're not routinely collecting in a way that reports back through the service agreements outcomes. Some of the reason for that is that some of those outcomes can be over a longer period of time so they're difficult to relate to a service agreement annual cycle. The other component of it is that it's not just what we do. Particularly for people who've got chronic conditions, they receive treatment in a whole range of different settings. A lot of that will be in settings that we're not directly responsible for. So what happens in those settings can have a direct bearing on their outcome, so attribution of that is a challenge as well.

I think we will be moving more towards outcome measurement but we need to be very careful about how we introduce it to ensure that we're holding the right people accountable for those outcomes and that we're able to report back in a way which is meaningful to the clinical teams and to the patients.

 DR CHANT: I suppose, Dr Lyons might want to touch on the fact that there are some clinical quality outcomes related to it, so that's sentinel events, falls in hospital or bloodstream infections. So there are some clinical components that are suitable for feedback for --

DR LYONS: For all patients.

DR CHANT: -- all patients, but suitable to reflect in a cycle of a service agreement.

MR GLOVER: Is that because those types of things are a little bit more readily measurable?

DR LYONS: That's correct. Things like hospital-acquired infections, falls, the things that Dr Chant has outlined, are measured all the time, now, in the system and are able to be reported back directly and they are part of the service agreement indicators around quality.

 MS WILLCOX: I was just going to add that the information around length of stay, the hospital-acquired complications, people having unplanned readmission in a short period of time, those measures which sit in the service agreement can be seen by broader department level, so clinicians are able to see their results with teams, and have discussions around these things and it means the executive and clinicians can work, if they are seeing some variation of there. Variation of itself is not a negative thing, but it is always worth inquiring. So they are process measures but they do allow for good engagement at a local ward or unit level to have a look at their patient care.

MR GLOVER: Is the effect of those combined answers that it may be easier to measure where things haven't gone quite to plan than when they've gone well?

DR LYONS: It's more a reflection, I think, of what the process measures are, the things that we are able to easily measure, so that's what we tend look at. Particularly where there are things that lead to an adverse outcome, we want to focus on those to ensure they don't occur, so I think that has been the process we've followed with the quality care indicators particularly in inpatient settings.

MR GLOVER: Can we go ahead in that document to page 28, please. This sets out a number of key deliverables under the heading "Performance Deliverables". Again are these relatively uniform across the service agreements?

DR LYONS: They are.

THE COMMISSIONER: Is that page 27?

MR GLOVER: It's 28 at the top.

THE COMMISSIONER: Yes. Sorry, my fault.

MR GLOVER: Are these individual deliverables or statewide or a mix?

DR LYONS: Could you just explain that question?

MR GLOVER: Yes. How are they set, is probably a better way to put it?

DR LYONS: Okay. So they're set on a statewide basis and reported on by the districts in relation to their own performance.

MR GLOVER: Is this an example of something coming from the centre, to pick up a phrase that you used earlier?

DR LYONS: That's correct, yes. So it's about what is defined as a level of performance we would want to see consistent across the system, and then each of the districts will report against their own performance in relation to that.

MR GLOVER: Thank you. That document can be taken down and we will go back to the report, please.

In paragraphs 48 through to 54, reference is made to the pillars. Ms Willcox, I might ask you. We have some general descriptions in those paragraphs about what the responsibilities of each of the pillars are, but perhaps some practical examples might assist in the work that they're doing on the ground. If we start with the Agency for Clinical Innovation and then take each in turn?

 MS WILLCOX: Thank you. The Agency for Clinical Innovation, one of their great strengths is the clinical networks that are established as part of them. So for specialty areas, it might be maternity, orthopaedics, anaesthetics, critical care, there will be a group of clinicians from local health districts and networks who come together to look at clinical variation, to look at models of care, innovation, look at data from other

jurisdictions as well as local, and help guide evidence-based best practice for the system. Their work is then shared across the local health districts for local implementation, if it's agreed it would form the basis of a statewide model, for instance.

MR GLOVER: Just a couple of terms you used there - "clinical variation", what does that mean?

MS WILLCOX: There would be, for particular surgical procedures, for instance, an expectation that a person would have a particular length of stay, you know, be able to do certain things at the end of that hip replacement, for want of a better - I'm just trying to think of a practical example.

If we're seeing variation, ie, extended lengths of stay or hospital-acquired infections in surgical sites, you'd have to say that might be a variation that was a problem and worth delving into.

 But other variation in other facilities with very short lengths of stay may be very positive. One example of that is that Royal North Shore, and I think also Lismore Hospital and perhaps others now, are doing hip replacements and/or knee replacements in a day. So it's about gathering the evidence and having a look at contemporary models of care and seeing what we can do to learn and improve and spread that evidence base across the system, so it's not pocketed in particular hospitals or services.

MR GLOVER: "Models of care" was the very next one I was going to ask you about. What do you mean by "models of care" when you use that phrase?

 MS WILLCOX: A model of care - it is a term used broadly, but essentially a model of care is how we can provide some consistency in the care of an individual, noting every individual has their own particular needs and complexities, but how that care or that service care should be provided in our hospital or service. So there would be an expectation prior to surgery that you would be seen pre-admission and have a particular round of tests, things done to check on your pre-surgical condition; the day you've come into hospital, the day of surgery, what you required, did you need to stop your medications, where you would go, what you could expect in terms of your surgical

procedure, where you would wake up, what you can expect with drips and drains, and the like. So the model is really describing the process of care that we're going to provide.

THE COMMISSIONER: A clinical pathway is what you're describing?

MS WILLCOX: A clinical pathway is probably a tighter way of describing it, yes.

THE COMMISSIONER: I'm known for my efficiency.

MR GLOVER: Please continue.

MS WILLCOX: Thank you.

 So Bureau of Health Information - Bureau of Health Information has been, I think, at least a decade in existence, it's an independent report on our health performance. They have generated a range of surveys over that period of time to measure access performance, including emergency department, how long it takes to receive care; surgical performance, is it done in a timely way; in relation to our ambulance performance and our safety and quality. So they extract data from across the system and run quite a rigorous methodology across those datasets to give what would be a statewide view of what performance is relative across the system, depending upon the complexity of the patients.

The Cancer Institute. The Cancer Institute is created by legislation to provide particular expertise in the care of individuals with cancer. As Dr Chant commented, one of the great things that the Cancer Institute has developed over time is looking at survival rates and mortality rates for different types of cancers in patients so that we can maximise their survival outcomes and their quality of life outcomes, identifying hospitals that might perhaps be providing only very low volumes of a particular type of cancer care or surgery and ensuring that those procedures are done in centres that are multidisciplinary with enough volume and the requisite infrastructure and services to give the very best survival and mortality outcomes for patients.

They also provide a lot of preventative advice around

skin cancer care, tobacco, and the like, and a research profile as well.

The Clinical Excellence Commission is really our peak part of the system that guides safety and quality across the system, heavily led by clinician engagement as well and evidence bases from around the world and locally, in order to drive safe quality care and consistency across the system, so develop policies and guidelines to enable that so that we all have the same approach to infection control, sepsis, a deteriorating patient, and other significant events.

They are also responsible for looking into adverse events that may occur in the system to give an independent view of how care is being approached and what might be the learnings or changes that need to occur as a result.

The Health Education and Training Institute essentially coordinates, as paragraph 54 says, the training and education across the system. Training and education is part of the DNA of our healthcare services. It happens at every interaction, every point, pretty much, in the system, but HETI supports that by working with the colleges and other training providers, stands up modules around mandatory training, whether that be for respecting the difference, for fire training - there's a myriad of training modules that HETI provides because they're the ones that, across the state, all staff, all clinical staff, would be required to do.

THE COMMISSIONER: Did you say "fire training"?

MS WILLCOX: Yes, fire and safety training.

THE COMMISSIONER: What, being a fire warden?

MS WILLCOX: Say again?

THE COMMISSIONER: Being a fire warden?

MS WILLCOX: No, it's so that staff have basic skills in attending to - in the event there were a fire in a ward or a unit, they would know how to respond.

THE COMMISSIONER: I've got it, yes.

MR GLOVER: How are they funded?

 MS WILLCOX: So all of the pillar agencies are funded out of the health budget and allocated that on a base budget that would be reviewed annually to see if there are additional programs or activities they're required to do that require supplementation.

MR GLOVER: In the following paragraphs, 55 through to 57, reference is made to "statewide services". What are the benefits of these services being provided on a statewide basis as opposed to being provided at a local basis?

MS WILLCOX: Do you want to talk to health protection? We might do them one --

MR GLOVER: Yes.

MS WILLCOX: Just in a general comment, both ambulance and pathology and health protection are fundamental service activities that all parts of the health system require. So having a statewide approach in order - how an ambulance service is run, where paramedics are, how they're dispatched and how that's managed as a system, there's an efficiency around that as well as a quality control around that, because it's statewide; people don't live and require services within a geographical area alone.

Pathology, there was a large body of work, and Dr Lyons actually led this organisation so can talk to it more fulsomely, but again pathology and having consistency around how pathology is collected, the results, the sorts of infrastructure you require to manage a complex health system that has simple blood tests right through to some of the most complex DNA and genomic testing, having a statewide approach to how those services are networked is efficient and adds to capability.

I will let Dr Chant speak to health protection because that's in her bailiwick.

DR CHANT: Health Protection NSW is a statewide service that is reporting into me as the chief health officer. It is headed by Dr Jeremy McAnulty, our public health physician.

We also have a network of public health units which

are located in local health districts. Some of those public health units bridge two local health districts such as Western NSW is hosted across both - covers Far West; in general, Murrumbidgee and Southern is also a shared public health unit, and for Northern and Mid North Coast there is a collective public health unit.

The most critical element of the public health units is that they're embedded within the local health district and report up through the local health district reporting structures. But the benefits of having this networked system means that we have on the ground people to follow up infectious diseases, but we can then centralise that intelligence. As you know, people move around the state, and so it makes no sense for communicable diseases to be looked at within the confines of the local health district.

We then report up into a national surveillance system, so there still might be the need to work in other jurisdictions, with the Commonwealth, with the Therapeutic Goods Administration, with other national stakeholders, and so we do that work at the centre.

We also work across government, and our local public health units then connect with government locally and all the other services that they're embedded within.

MR GLOVER: Dr Lyons, did you wish to add anything?

DR LYONS: Only to say that, at a high level, these are services which, on balance, providing them across the state provides a better service delivery model through economies of scale efficiencies, standardisation of practice, getting a consistent approach in terms of the way those services are delivered. So that's where the services have been delivered on a statewide basis, the benefits of doing so have been achieved and why they've been picked out to be delivered as statewide services.

MR GLOVER: Are there any limitations in delivering them on a statewide basis?

 DR LYONS: I think it's always about that relationship with the services at the local level, because they are part of the system so there's a requirement for all of these services to have an effective working relationship with our clinical services right across the state, and so those are

ongoing and are important, but I think they're being delivered in a way that is - the feedback from the customers is able to be received and fed back into the way they're operating.

DR CHANT: I would like to highlight that health protection is probably slightly different, because it's really embedded within the local health district and we have the networked arrangement to the state, and I think that benefits very much from the local knowledge, the local operating context and how important and critical that is; but also the opportunity that the public health units have to leverage off the broader assets within the local health district, so, for instance, community health nurses or other professionals that they require to do their response.

MS WILLCOX: If I perhaps could just add in relation to pathology, just as another example, pathology departments exist in most of our hospitals, and those relationships are integral with our clinical teams in order to ensure that we've got the tests that are required and the capability to care.

For instance, if you're at a Royal Prince Alfred or a Royal North Shore, with very sick patients, the types of pathology services you might need might be different to somewhere in a small rural community, but those services are networked. The local health districts have regular meetings with their New South Wales pathology partners, they are divided into networks across the state, so it is again a very embedded relationship with the sharing of data and information to make sure the services they're providing, even though statewide, are working locally with the teams.

MR GLOVER: The concept of networked services comes up in a few places. What does it mean at a practical level?

 MS WILLCOX: In a practical level, it goes to the point that for some things - for instance, Dr Lyons referred to clot retrieval in stroke patients. It's not conceivable that you could have that capability infrastructure and multidisciplinary team in every hospital or service across the state. Decisions are made around the location for that, based on all those things I just outlined, and then the networking is done to enable that accessibility and equity issue that we've talked about also, so that if

a person is in a different area, that there's a communication pathway, clinician to clinician, so those services are then networked to enable the access that that person might require, even if they're not on that particular location.

So networking is about ensuring capability is in the right places, it's about ensuring we maximise the spread of our services, so they have greater access to our community.

At a local health district level, those services will be networked between, frequently, a flagship hospital and a smaller, less complex hospital. If I take Sydney Local Health District, for example, they have Royal Prince Alfred and they have Balmain and Concord and Canterbury, all very different in terms of what they provide. But if you're in that area and need to come into care for that, your care will be attended to at the right level of hospital with the right capability, and that networking of services enables that geographical spread and that improved access for patients.

MR GLOVER: That straddles local health districts?

MS WILLCOX: Yes, it does.

DR LYONS: Indeed it does. In fact, it is very defined. We have what is called a role delineation which includes defining the level of service that is provided, quite explicitly, and each of the hospitals or services within the state will define what role they play and then how it relates to another service, so that if they can't provide that service locally, what the connection is to ensure that a patient who needs that can be cared for appropriately by referral on.

MR GLOVER: When you say "role" and "service", you mean the treatment that can be delivered in that context?

DR LYONS: Yes. It defines what resources are available locally, how that relates to the lowest level of service that could be potentially provided, to the highest level across the state. I think there are six levels, six being the highest, zero being no service at all, so each of the services would define what level they are and how that creates a network either within the district or across the state for that service.

.28/11/2023 (002)

MS WILLCOX: One example would be an intensive care service that is now networked between Royal Prince Alfred Hospital and Broken Hill Hospital. It's a virtual model that enables the clinicians at both sites to connect, for the clinicians at RPA to observe a patient in Broken Hill and assist those local clinicians to make the appropriate decision of care. That may be to transfer a patient out, but it may be that that care can be managed locally.

So there's the networking within a district, there's the network at state level for the sorts of services that Dr Lyons described, but there might even be networks of the nature which are a more innovative nature, to continue to ensure that we can improve access: no matter where you live, you can get access to these particular services.

MR GLOVER: Dr Chant, did you wish to add anything?

DR CHANT: I suppose just in drug and alcohol, we've seen the advantages of telemedicine in addressing some of the equity of access issues. For example, there are hubs out of both Hunter New England Area Health Service and also St Vincent's that actually support rural/regional through a telemedicine hub.

So again, these are just innovative ways in which our services are networked. So the networking probably happens seamlessly, there are also referral pathways - many of our clinicians travel to rural/regional, so at all levels there's networking.

MR GLOVER: So there is some organic networking as well as defined --

DR CHANT: That's correct. Defined and structured networking.

MR GLOVER: Lastly on this topic, in paragraph 58, reference is made to the stability of the governance framework over the last decade, although there's an opportunity to assess the balance between centralised decision-making and devolution. What are the opportunities that you each see in that area?

DR LYONS: I think it's constantly under review, but if I use the example of planning, and we've talked about

planning a little bit during the course of this morning's conversation, we have, under our devolved arrangements, left most of the decisions around planning of services and in particular the planning of new hospitals, to the local health districts, and in the course of the last 10 years, what we have identified is that perhaps we are planning for more of the same with our hospitals; we are focusing on delivering bigger and better, and more beds. at what the directions are in the future health strategy and the needs of our community, perhaps our focus needs to be more out of hospital. While hospitals are very important and we need to maintain their expertise and support that, the balance might be that we have more investment in community-based services rather than continually building bigger and larger hospitals with more beds.

So on balance, the governance arrangements, it might be an opportunity to start to say, "Well, in terms of planning those facilities, perhaps we bring some of the planning oversight around the building of new capital to be more closely scrutinised by the centre, before final decisions are made around what will be built", to challenge some of that thinking and to think about, you know, perhaps what might be different rather than building more of the same. That's an example of that balance, and where, historically, we might have had more centralised decisions that have been devolved, now we're saying that what we're experiencing is perhaps that we need to bring some of that closer to the centre so that we get a better outcome in terms of resources.

THE COMMISSIONER: That's to get the capital expenditure aligned with the health services that are likely to be needed to be delivered?

DR LYONS: That's correct, Commissioner. What we're seeing is that with the capital builds and the operating costs of those, if you map those out into the future, it's going to be a real challenge for us to do that within the budget we have available. So it is about starting to think about what's the better alignment of capital build resources and how they are deployed to get the best balance of service delivery.

MR GLOVER: Dr Chant, do you see any opportunities in relation to the balance between centralised and devolved

decision-making?

DR CHANT: I think Dr Lyons reflected that that's continually under question, which services can deliver the same patient connection and meet the needs of clinicians, and the question is clearly the centralised approach to health pathology - I would like to do a big callout, I think that has been a really amazing success and supported a lot of the health protection and other areas in my portfolio, but are there other services that would similarly, because of the investment in technology --

MR GLOVER: Radiology, for example?

DR CHANT: There would be a range of things that could be - the question needs to be asked, which things need to be centralised. But I think the key component is --

DR LYONS: And why.

DR CHANT: And why. But the key component to that is a recognition, though, that we need to support the patients and the clinicians at the coalface. So any decisions around centralisation need to still be very connected and embedded and meeting service needs, because ultimately we deliver health care, and that's a very human experience for patients and the clinicians involved. But there may well be some services that we consider would benefit from a greater statewide governance, and that's continually under review.

MR GLOVER: Ms Willcox, do you wish to add anything?

 MS WILLCOX: I think this debate, we have to have with our communities as well. The comments that Dr Lyons made around the capital planning are absolutely correct, and I think there's an opportunity to test some of the assumptions that we think - what we need in terms of built form and what does community want and expect. We know that --

THE COMMISSIONER: It's not just building more infrastructure; it's also whether you hold on to some infrastructure?

MS WILLCOX: Yes, that's right.

THE COMMISSIONER: Which is where the community and politics might all come into play.

MS_WILLCOX: Yes and there's no question that the

MS WILLCOX: Yes, and there's no question that the community have had an expectation that they have a hospital in their community and they expect that it may be rebuilt or renovated at particular points and they need additional things, and that's all absolutely appropriate. But I think it's about having a discussion around the community-based care, some of the other options. There's no doubt that during COVID the evolution of doing things differently has really accelerated and our own planning processes have not accelerated at the same rate, not surprisingly because we were dealing with COVID, but it is something that we do need to attend to and work with the community on.

MR GLOVER: Thank you.

Is that a convenient time.

THE COMMISSIONER: Mr Glover, no-one can grab your gown and give it a tug, but I think your co-counsel wanted to perhaps you can do it over the break.

MR GLOVER: We can do that over the break.

THE COMMISSIONER: You can do it over the break.

MR CHENEY: Commissioner, might I inquire whether there is any difficulty with my team speaking with the witnesses during these breaks?

THE COMMISSIONER: No, not at all. I don't think they are being cross-examined in an adversarial setting, so that's fine. But have a conversation with Mr Glover as well about what the discussion is about. But otherwise, yes, that's fine.

We will break until 5 to 12.

MR GLOVER: Thank you.

SHORT ADJOURNMENT

THE COMMISSIONER: Can I just ask a question first?

MR GLOVER: Of course you can.

THE COMMISSIONER: When we were talking about patient outcomes and - sorry, health outcomes and getting feedback from patients, were any of you referring to HOPE? Sorry, that was part of the workshop we had on - that was the program that was being --

DR LYONS: It's health outcomes and patient experience, Commissioner.

THE COMMISSIONER: Yes, thank you.

MS WILLCOX: It is the ICT platform that's used to develop --

 THE COMMISSIONER: Yes, all right. I think the way it was described to us, apart from giving direct feedback from patients about what their experience was, it's - I think it was explained to us that it can be also a means of identifying low value care. One of the notes I made was - for example, the note I made was, "I've had an arthroscopy. My knee is no better". If that's the feedback multiple times, then it's a means of identifying low value care as well.

Okay, thanks. Go ahead.

MR GLOVER: Thank you.

Just before we move to funding, in terms of the balance between centralised decision-making and devolved decision-making, is one of the challenges the sharing of information or innovations between districts?

DR LYONS: That is an ongoing challenge.

MR GLOVER: How is it addressed?

 DR LYONS: We have established a range of mechanisms to assist in that regard. You would have heard of the role of the Agency for Clinical Innovation - that is one example. But all of the pillar organisations have been established to have a statewide remit but have a presence in the local health districts in clinical services as well, through our directors of clinical governance in relation to the Clinical Excellence Commission, who have a relationship with the Clinical Excellence Commission, through the

clinicians who are part of the clinical networks and the Agency for Clinical Innovation.

Health, Education and Training Institute have a connection with the local health districts through the education practitioners within the districts. So all of them have been established to try to ensure that there is an opportunity, where there are pockets of excellence or better practice or innovations that have potential to benefit the whole system, that they are able to be acknowledged, but then shared through those mechanisms.

 Now, that isn't always easy to achieve, because, what might be a priority for one local health district in their context and the things they are dealing with, may not necessarily be a priority for another. And equally, as we have tried to share some of these examples of better practice, the way services are delivered in one context is not always the same as they're delivered in another by nature of the fact of the way the services are offered, the staff that are in those services, the experiences that they have - like, their qualifications and experience might be difference and the mix of staff might be different.

It is not as easy as just taking what is happening here and saying it now has to happen over there. It needs to always be contextualised and supported, and the other issue is that the skills in managing change are a skill set which need to be supported in their own right.

So issues around how you redesign a clinical service, how you embed and sustain those changes in clinical practice, is a specific skill set with evidence around it, and not all of our staff have had access to that evidence base or that education and training.

So those organisations are not just looking for those opportunities but are also involved in providing that education and training and that skill set development across the system.

 It is a really important area of focus. It is sometimes simplistically thought that, well, if it is happening over there, why doesn't everyone just do it? There are a whole range of reasons why that is not always possible, but our role is to facilitate support, and if it is necessary, ultimately, to mandate a change because it is

of such value and so important that we address it as a priority across the whole health system, to do that as well.

DR CHANT: Could I add with the research lens how we also enable this. I think Dr Lyons has talked about how we use clinical networks, and those could be through the ACI but also through other program areas.

The next way we do it is through supporting research, because obviously one of the first steps before you might scale an initiative is generating the evidence that it meets the outcomes, it's effective. So we have a program that is run by Jean-Frederic Levesque's area in the Office of Science and Medical Research, which is called the Translational Research Grants Scheme.

 This enables districts to put up projects which they actually think have the potential to scale and it provides funding very often and a proper evaluation of that. That's also reviewed by experts, but people within the ministry who can also look at those issues that Dr Lyons spoke about: is this something that truly could be scalable, because of the context, and perhaps even in the development of those research projects, bring in other districts, so that it's not just one district that starts off, we actually partner with another, we might want to test across a rural/regional and say, "Could you find a rural partner to demonstrate the scalability of this initiative". So that's just another example, and there is also a report that's been completed on how those initiatives have been implemented and scaled.

MR GLOVER: Ms Willcox, before the break we were discussing networks, both organic and policy based, if I could put it that way. To the extent that they are centralised in terms of design, how are they designed to ensure that they're effective and there are no gaps across those networks?

 MS WILLCOX: If I take an example of intensive care services, ensuring that within a local health district - so if we talk within the geographical confines of a district - reference to the clinical service planning and the role delineation of the hospitals within that district will be relevant to how and where they network their critical care services. So it might be the major flagship hospital will

have all of the complexity of critical care that you might expect, with ventilation support and blood pressure and heart and a range of things, but a smaller hospital in the district will provide some sort of lower-level coronary care monitoring - oxygen and the like.

So the aim is to look across the local health district, understand your role delineation, the capability, workforce and infrastructure resources, and to cross-check that, within a defined area, you have the capability to care for people if they come into your care or cross your border into your geographic boundary into care.

When it comes to the larger services that I think Dr Lyons referred to previously, such as burns and spinal, that lifts up to another level and ensuring that patients who require that complex burns service or trauma care, it's about including communication with clinicians with our ambulance services, our aeromedical retrieval and our other emergency responders, so that there is a knowledge and a protocol that identifies the appropriate location for an individual to go, depending on their needs.

MR GLOVER: The more organic networks, do they develop through relationships between clinicians in different areas?

MS WILLCOX: Yes, I think that that is true. For a large system, there is a high level of connectivity between our clinical staff. People work and collaborate across boundaries, they research together, they do clinical trials together, they do studies together. The Agency for Clinical Innovation, as mentioned earlier, the broad and vast representation of clinicians across those networks is another way in which information is shared.

Now, some of that will be formally propagated across the state or across particular local health districts, but some of that information sharing will just come back from an individual back into their service and generate discussion and potential change and redesign.

MR GLOVER: Do those more informal networks sometimes develop into formal networks to ensure that the benefit of them continues even if the personalities change?

MS WILLCOX: Yes, I'd hark back again to the Agency for

Clinical Innovation really as being the engine room for that to occur. There are other things that we do, however, in the system, such as recognising innovation through local awards and for staff to present at forums, for those things to come forward to the senior executive forum - that all the chief executives of the pillared, shared services and special networks attend every month - and again, it may appear informal in a sense but these things are quite deliberate, that we encourage staff to tell the story around how they've designed a particular service, we're very focused on the outcomes and the evaluation of things, and that is shared amongst colleagues and promoted from various means of communication, whether it be websites or newsletters, through the secretary's message out to the system.

MR GLOVER: I'm going to move on to the topic of funding. Again, I think, Dr Lyons you've been nominated as the lead for this series of questions.

THE COMMISSIONER: Just before you do, you asked some questions about paragraph 58 of the report.

MR GLOVER: Yes.

THE COMMISSIONER: Can I just ask any of the witnesses - I think you were asking Dr Lyons, but it doesn't matter - Mr Glover asked, "What did you mean by 'opportunity to assess the balance between centralised decision-making and devolution?'" The paragraph is in the context of the pandemic. Is relevant to that the review that I think was called "As one system" and some of the findings in relation to that, or was that more specific to a public health crisis rather than something broader?

 DR CHANT: I think that probably the linkage to the pandemic just reflects on the fact that the pandemic implemented a range of systems which demonstrated different ways of working, many of which were effective and very acceptable to communities. So I think the link to the pandemic was not really the one systems review. It was more reflecting that the pandemic led to a number of innovations, probably e-prescribing, electronic prescribing, the growth of telemedicine.

There has also been a lot of evidence generated through that period with different modalities where we can

be more confident that they are acceptable to patients and deliver the outcomes, however - you know, a perspective on outcomes.

I think that that reflects the opportunity to, even within a district, potentially do more centralisation, particularly if you are scrabbling with workforce shortages, and so I think it just is that opportunity. The governance - the devolution could be within a district, to a more centralised structure, and then also reflecting from the districts to the state. So I think it was really the terminology, at least from my perspective, was in reflection of the pandemic and how it had opened up different possibilities of service delivery configuration.

DR LYONS: I think to expand on that a little bit, Commissioner, the other comments around the pandemic response was that the way we were structured enabled us to respond quite rapidly to the crisis of the pandemic, and there were a number of decisions that were made centrally. We had a regular assessment of the level of risk in our facilities and agreed on a ratings scale of risk, and what that meant in terms of PPE use right across the system, which was consistent, being set up with the CEC and with the structures that we had enabled us to do that.

Equally, the deployment of personal protective equipment through procurement through HealthShare meant that we made sure we had availability of PPE right across the system and that we never ran out because of the centralised approach.

Pathology was another example of where we were able to set up testing and be really flexible about that and ensure that access to testing was maintained right through right across the state. I think what we have reflected on is that the benefits of some of these system-wide and statewide services within the context of local decision-making as well, on reflection, has provided us a very good system and we need to continually assess. It depends on our context as well in relation to a crisis, you centralise a lot of things because you have to, but it also allows us that assessment of, well, what do we need to keep centrally, what do we continue to allow local decision-making on and making sure we continually assess that?

 THE COMMISSIONER: Sure. Thanks.

MR GLOVER: We move to the general topic of funding, and that is dealt with in paragraphs 4 and following of the report.

Just to set some context, Dr Lyons, the funding of the public hospital services is a shared responsibility between the Commonwealth and the state and territory governments; is that right?

DR LYONS: That's correct, under the structure systems and processes of the National Health Reform Agreement.

MR GLOVER: And those structures evolved from reforms in about 2011, and commenced in 2012; is that right?

DR LYONS: That's correct.

MR GLOVER: What was the approach to funding of public hospital services before those reforms?

 DR LYONS: So before 2011 the state funding was distributed to the area health services, as they were then, on the basis of a population-based approach, which was called the resource distribution formula, which had as the primary driver of the allocation of resources the population that the area was responsible for, but with a number of adjustors that reflected the different contexts that services were being delivered into.

 For instance, there was an adjustor for rurality to reflect the fact that services would be dispersed and provided in a less concentrated way which had certain costs attached to it. There was an adjustor for the proportion of your population of Aboriginal and Torres Strait Islander background, because that was important to acknowledge, that there might be specific needs that needed further resources for that particular population group and ensuring their outcomes were improved.

 There was an adjustor for private health insurance, which was reflective of the fact that within a district or a health service at that stage, a certain proportion of the population could access services, if they were insured privately, through the private hospital sector, so that would take some of the burden off some of the public

services. That's an example of how it was distributed but primarily the driver was population.

MR GLOVER: How it's currently distributed is now very different; is that right?

DR LYONS: That's correct. There was a historical base, so it's important to reflect that we've started from We started in 2012, when we introduced the new arrangements, with the funding that the health services already received as a base, and then under the National Health Reform Agreement, funding for growth is now determined around purchasing activity through an arrangement where the system manager, by agreement with the service providers, the local health districts, strikes a level of activity to be delivered, and so the resources then flow based on the level of activity, and that is defined through the arrangements in the NHRA, and the Commonwealth contributes a proportion of that, which is 45 per cent of growth.

MR GLOVER: We'll come to that, but just in terms of structure, under the current arrangements, the Commonwealth contributes on an activity basis, on a block basis and some what's described as public health funding; is that right?

DR LYONS: That's correct. There are a range of different components of the Commonwealth funding.

MR GLOVER: And there's also the ability of the states and territories to enter into bilateral agreements for other funding from the Commonwealth; is that also right?

DR LYONS: That's correct.

MR GLOVER: Now, just before I interrupted you, you were explaining what is sometimes referred to as the growth model of the Commonwealth's contribution. What does that mean in practice?

DR LYONS: So under the National Health Reform Agreement, the Commonwealth has agreed to fund 45 per cent of the growth in activity that the states and territories undertake in terms of service provision. So that's for all new activity over and above the base at the time of the agreement being struck, and within a defined scope of services.

 1 2

> 3 4

5

6

7

8

the "general list". It defines those services that the Commonwealth considers to be in scope for its contribution. That 45 per cent growth is contributed based on an annualised level of activity for the state, which is then distributed across to all of the local health districts and service providers as part of those service agreement

9 10 11

Is the Commonwealth's contribution under those MR GLOVER: arrangements subject to a cap each year?

arrangements that we've talked about previously.

That defined scope of services is often referred to as

12 13

14

DR LYONS: It is. It is.

15 16

MR GLOVER: What's the cap?

17 18

19

20

21 22

23

24

The cap is 6.5 per cent per annum cap, and DR LYONS: that's a national cap and that's a hard cap. So if one of the states or territories had growth which was significantly greater than one of the others, but it meant that the Commonwealth contribution would be breached at the 6.5 per cent, then the cap is held for everybody at that point, irrespective of where they are in relation to their growth.

25 26 27

MR GLOVER: Has it ever been reached?

28 29

DR LYONS: No.

30 31

MR GLOVER: Does the cap apply to each of the funding sources under the NHRA?

32 33 34

35

36

37 38

39

40

41

42 43 DR LYONS: It's primarily related to the activity, because potentially activity is open ended, however we would say that activity is not open ended because it's actually defined by the level of funding which the state provides to the health system, and that dictates the level of service that we can negotiate with the district to provide within the resources that we have. So there is a notional allocation, which is annualised and which defines the level of activity which can be afforded, and it's driven by the state budget, with the Commonwealth funding flowing based on the activity that's delivered.

44 45 46

47

MR GLOVER: In paragraph 10 of the report, reference is made to the fact that state public health services are

provided free, and then the observation is made that:

As individuals do not incur any cost ... this unintentionally drives activity to the public health system.

What did you mean by that?

 DR LYONS: So we are the safety net for everybody. Our services are always available and open, and if people attend our services then, under the health agreement, we are obliged to treat them and provide them appropriate care.

 Now, in our system, the access is primarily in terms of undifferentiated or un-arranged access, through the emergency departments. So what we're seeing through our emergency departments across the state is ever-increasing levels of activity over and above what would be expected with just purely population growth.

At the same time, we're hearing that issues around access to general practice and primary care in parts of our state are challenging, because providers are not available or, if they are available, they may not be operating at certain hours of the day or days of the week, or alternatively, they may be charging patients at the point of care to an extent where people are choosing to go where they can seek treatment at no cost. That's something which we believe we are seeing as a result of some of the changes that are occurring in other parts of the system - so patients attending our services for those treatments, through emergency departments as an example.

Another example would be through our specialist outpatient clinics where our specialist outpatients clinics are seeing increasing numbers of referrals of people who might otherwise have been seeking treatment through specialists in private practice - that is, because we believe there's an issue around cost and access related to availability of practitioners and also to the level of out of pocket costs for patients at the point of care.

 MR GLOVER: By that, do I take it that the unintentional driver is that these are patients who would otherwise be seen in what's described as the primary care system but, for reasons of access or affordability, they are finding

their way into the public hospital system; is that right? 1 2 3 DR LYONS: That's our contention, yes. 4 5 THE COMMISSIONER: Don't take this as a criticism, either counsel or witnesses, but we went past the resource 6 distribution formula, without me fully understanding how it 7 worked, which I will take responsibility for, but do 8 I understand it that allocation of funding based on 9 resource distribution formula which would have been to the 10 health areas before, the LHDs, right --11 12 DR LYONS: Yes. 13 14 15 THE COMMISSIONER: -- is based on population, population growth and certain demographics or the region or area? 16 17 DR LYONS: That's correct, Commissioner. 18 19 20 THE COMMISSIONER: So were there CEs of the areas back 21 then? 22 23 DR LYONS: There were. 24 25 THE COMMISSIONER: If I was the CE of the local health area, I would get funding based on how many people are in 26 27 my area, what's the predicted growth of the population and 28 do I have, for example, lots of people with complex chronic 29 disease in my area? 30 31 DR LYONS: The adjustors dictated. So they were primarily 32 around things like rurality, Aboriginal population, private health insurance status, and the ability to have substitute 33 34 services available. They were the primary things that 35 I can recall at that stage as being part of it. 36 THE COMMISSIONER: Is that how both the ministry funded 37 local health areas and also how the Commonwealth, based on 38 39 the same formula, provided money to the State of New South 40 Wales, or --41 So my understanding of the Commonwealth at that 42 DR LYONS: 43 stage is that it was primarily population with an increment each year reflective of increasing costs. So it was just 44

CPI?

45

46 47 a --

THE COMMISSIONER:

DR LYONS: --- CPI type arrangement on a block arrangement to the state at a certain level which was dictated by the Commonwealth and purely population driven with that increment.

THE COMMISSIONER: Please don't hesitate to say I should be asking someone else about this, but the shift away from resource distribution formula to activity based funding was because obviously there was a drive by the Commonwealth that it wanted to do it this way, but what was the reasoning?

DR LYONS: Well, it was a requirement under the National Health Reform Agreement, so we had to.

THE COMMISSIONER: Yes, but there must have been a debate about whether it was a good idea?

DR LYONS: There was. I think at that stage my recollection - and it is my recollection - is that there was a concern that the Commonwealth could not see, from the investment they made, where that investment was going to, because there was no ability to see --

THE COMMISSIONER: So better transparency.

DR LYONS: So greater transparency.

THE COMMISSIONER: If I'm the Commonwealth, I'm saying it's more transparent to have you supply all your activity costs and we can work out the funding and we know what we're paying for?

DR LYONS: That's correct. So they could have transparency, visibility of where their investment went and what it led to as a result, and seeing that directly was very important.

I think there was a lot of feedback from the system at that stage, or concern, that potentially the Commonwealth investment was not necessarily flowing through to the services, it might have been going somewhere else, and so that direct relationship was of comfort to the Commonwealth so they could see that.

And I think there was a view that the system was not

necessarily as efficient, technically, as it could be, and 1 2 so - and looking at the variation in cost across the nation, different states were costing different amounts, 3 the Commonwealth wanted to standardise its contribution and 4 to drive that efficiency of service delivery. 5 6 7 THE COMMISSIONER: And the view was that ABF, at least in the public hospital system, would drive efficiency better 8 than the current funding was? 9 10 DR LYONS: That's my understanding, Commissioner. 11 12 Do either of you want to add to --13 THE COMMISSIONER: 14 Perhaps just to comment on the resource 15 MS WILLCOX: distribution formula. It was a state government initiative 16 back in around the mid '90s or slightly thereafter, in 17 order to try and use some levers to improve equity of 18 19 services, so there wasn't a domination of funding into the cities and to try and push money out into the area health 20 services. 21 22 THE COMMISSIONER: 23 I think it has been described to us as to ensure that the loudest voices didn't prevail, but the 24 25 data that said, "This is what is actually needed in these health areas to have equitable health funding" --26 27 28 MS WILLCOX: Yes, that's correct. 29 30 DR LYONS: Commissioner, the debate about equity is prevalent no matter what basis of distribution is used. 31 32 THE COMMISSIONER: 33 Yes, sure. 34 35 DR LYONS: I'm sure you'll hear similar issues around 36 equity. 37 THE COMMISSIONER: 38 Okay, thanks. Just before I leave paragraph 10, did either 40 MR GLOVER: of Dr Chant or Ms Willcox wish to add to Dr Lyons' answer 41

39

about the drivers of activity to the public health system?

43 44

42

MS WILLCOX: No, I think Dr Lyons summarised it well, thanks.

45 46 47

DR CHANT: No, thank you. MR GLOVER: In paragraph 11, reference is made to the National Health Funding Body. That's one of at least two, maybe three, bodies set up under the National Health Reform Agreement. What are the others?

DR LYONS: There is the funding administrator, who is responsible for administering how the funds are distributed. There is the Australian Commission on Quality and Safety in Health Care, which is responsible for oversight of the clinical quality and safety of patients cared for across the system. There's the Independent Health and Aged Care Pricing Authority, which is - I always stumble over the aged care because that has been added in most recently.

MR GLOVER: It used to be the Independent Hospital Pricing Authority.

 DR LYONS: Yes, so it has the responsibility for undertaking the costing methodology, so understanding what the cost of providing services across the country in the hospitals that are in scope are and then defining the national efficient price and agreeing on the basis on which the Commonwealth's contribution to the 45 per cent growth will be delivered to the states.

MR GLOVER: I just want to break that up a little bit. I'll use the acronym IHACPA. It has the function of setting or determining the national efficient price; correct?

DR LYONS: That's correct.

MR GLOVER: The national efficient cost?

DR LYONS: Correct.

MR GLOVER: And what is considered to be in-scope activity; is that right?

DR LYONS: Correct.

MR GLOVER: What's the national efficient price?

DR LYONS: The national efficient price is determined as a result of gathering information from all the states and

territories who provide those services, and the costs of doing so, relating it to case mix activity that is reported through and coming up with the cost of providing care for those patients for those classifications that are in scope across the country.

Out of that, then the national efficient price is determined based on all of the inputs from all of the states and territories and that distribution across, and it is the average, I understand, of all of those costs that becomes the national efficient price.

MR GLOVER: So it is one number?

DR LYONS: It is one number.

MR GLOVER: What does it seek to represent?

 DR LYONS: It seeks to represent what should be the cost of providing care if care is delivered efficiently according to the costing approach. So it defines in the Commonwealth contribution, because they only want to contribute to efficient care, so if a state or territory is over the cost, the Commonwealth contribution will be pegged at the national efficient price, even though their costs of delivering care are higher.

MR GLOVER: When you say "the efficient cost of delivering care", what's the unit of care against which the price is applied?

DR LYONS: The national weighted activity unit.

MR GLOVER: What's that?

DR LYONS: That is a unit that is derived out of primarily the classification systems that define categories of care - they are like streams of care or service delivery components - and they are based on a classification methodology: for inpatients it is the diagnostic related groups, which has been a case mix instrument for many, many years and there is an Australian version of that. It reflects the complexity or resource consumption for delivering care for certain types of patients, depending on the complexity of the care that is needed.

So for a simple patient who doesn't need a lot of

care, it might be around 1, as defined under the national weighted activity unit. For a more complex patient, or a less complex patient, the relativities are defined around that one activity unit reference point.

MR GLOVER: Do I take it that one NWAU, if we use the acronym, is the average inpatient episode of care?

 DR LYONS: Not necessarily the average. It is defined as the unit that reflects the base on which everything else is referenced. I think that's probably the better way to reflect it, because then the complexity of care that is delivered for, say, a heart transplant will be relative to that NWAU of 1, as will somebody who comes in for a hip replacement. It is referenced against that one resource consumption unit.

MR GLOVER: And it is referenced as either a fraction of 1 or multiples of 1; is that right?

 DR LYONS: That's correct. So if it is an outpatient clinic it might be a fraction, because the complexity is low and the episode is short.

MR GLOVER: Dr Chant, did you wish to add anything to that?

 DR CHANT: No - I don't want to confuse the issue with DWAUs, which are dental weighted activity units. It is a similar principle. They are just multiples. It is just like a generic coin and then some procedures are more complex and that will be multiple, and then we use it as a way of what we expect would be the cost inputs in an efficient environment.

MR GLOVER: And the national efficient cost - what's that?

DR LYONS: That is the cost as reported by the entities that report through. So it should have a direct relationship to the national efficient price.

I am not a technical expert to define how they relate, but one is the cost of actually delivering those services and the other is the price that is then struck as being the national efficient price. That would be a very good question for IHACPA to talk about.

 MR GLOVER: They may well get the opportunity. Is the national efficient cost used for block funding?

DR LYONS: That is, I think, the primary driver for the block funding, because it reflects the cost of delivering those services, yes, and it can't be related to activity.

MR GLOVER: In terms of IHACPA's role in terms of determining what is in scope, how does it go about doing that and is it an ongoing process?

DR LYONS: It is an ongoing process. When the agreement was first struck, there was a certain agreement about the services that were provided by hospitals that the Commonwealth would define as being the services they would contribute to, and there is a list, actually, of all those services.

IHACPA has also the responsibility for assessing requests from the states and territories, or even from the Commonwealth, for that matter, about changes to that general list that might reflect changes in practice or the way services are delivered. But it has to be around hospital or hospital substitution, because it has to be hospital-like care. That's I think a prerequisite or requirement. And for it to be considered, it has to be demonstrated that there is actually some evidence that this new way of delivering care is appropriate and cost-effective, before the IHACPA will consider it to be added to the list.

MR GLOVER: Is that a lengthy process?

DR LYONS: It is a very lengthy process. We have had examples of submissions that have been made through to IHACPA that have either been rejected or have been asked for further information, and that is an annual cycle process, so it can go through at least a couple of annual cycles before a decision is made as to whether or not those services would be agreed to be on the list.

MR GLOVER: And are there some activities undertaken in public hospitals that aren't within scope?

 DR LYONS: Increasingly so. I think we have talked about the role that our local health districts have which goes beyond the bounds of a hospital into the community, and

increasingly what we've observed with this increase in activity and demand coming through to our services is a need to think about how we might deliver care in a way that prevents people needing to come to hospital. increasingly invested in programs that are not funded through those arrangements of the general list or the Commonwealth contribution, into things like integrated care strategies or a program that we have called "collaborative commissioning", which is I think over the last five years or so around about a \$20 million per annum contribution across the state, to define different ways of delivering care that drive innovation and integration of the system, both of which are very important and desirable, which is connecting the system up more effectively and providing new ways of delivering care that might take the pressure off provide better care for patients, first and foremost; involve primary care and community-based providers in delivering that care more effectively as part of the team; and ultimately taking the pressure off our hospital services.

21 22

7

8

9

10

11 12

13

14 15

16 17

18 19

20

MR GLOVER: Is that what you mean by "integrated care" - that is, crossing the spectrum between in-hospital and primary care settings?

242526

27

28 29 DR LYONS: We would use that as one example of integration but it is not the only example, but certainly integration between parts of the system that are different responsibilities and don't automatically connect, is where we're looking at integration.

30 31 32

33

34 35 So other boundaries would be aged care and the state health system interface. Another boundary example would be the National Disability Insurance Scheme and care for people under that scheme and its relationship to health care delivery on the state side too.

36 37 38

MR GLOVER: We might explore some of those arrangements a little later.

39 40 41

THE COMMISSIONER: Are you talking about trials under the National Health Reform Agreement or something broader than that?

43 44 45

46 47

42

DR LYONS: These are not trials under the National Health Reform Agreement, they are before that point, Commissioner. So it is about us, the state, investing in new ways of doing things to test whether they have an impact and whether there is an argument that should be put forward about them being scaled.

THE COMMISSIONER: And when you say "the state investing", it's the state's money because they are not coming up as activities that ABF relates to?

DR LYONS: That's correct. In fact, we've now had some response from the Commonwealth around some of those programs to say that they would be interested in considering them for funding. So it's important that we do drive these innovations and look for new ways and look for ways to get those contributions in for those changes.

MR GLOVER: Dr Chant, did you wish to add anything?

DR CHANT: Probably not at this point, but I suppose just to reinforce that one of the components probably just to touch on briefly is the fact that perhaps the current pricing system doesn't reflect the full cost of perhaps preventative care in all of its elements, and also those equity dimensions by which we know that to achieve those same outcomes, we may need to provide more intense or wrap-around services, and those services that many of our local districts incorporate are not adequately reflected in the current funding models.

MR GLOVER: What is it about the current funding models that doesn't pick those activities up, or at least well?

DR CHANT: I think Dr Lyons is more familiar with the intricacies of it - so please jump in - but I think ABF drives more for technical efficiency, and not all things --

THE COMMISSIONER: So ABF is like funding what I think what is called a case mix; the MBS funds fee for service, but chronic conditions might require a cycle of care that isn't quite picked up in either funding model.

 DR CHANT: And what we know is to achieve outcomes in many areas, we need much more multidisciplinary teams, and to achieve some outcomes we actually need to work effectively across government agencies and non-government organisation sector. All of that is resource intensive, but in order to achieve the same outcomes for that individual we need to work in that way, and that isn't reflected in some of the

current funding programs.

1 2 3

4

It is from the state, the state does institute some of the programs to address that, but it isn't reflected in probably the Commonwealth-state funding arrangements.

5 6 7

8

THE COMMISSIONER: Is that where we talk about things like bundled payments or blended - is there a difference between bundled and blended?

9 10 11

12

13

14 15 DR LYONS: A bundling could be within our system and we pay for all of it; blended would be where we would seek a component across the boundaries of MBS and - so I think, Commissioner, you are absolutely right. There has been a mid-term review of the National Health Reform Agreement just recently that you are aware of, I'm sure.

16 17 18

THE COMMISSIONER: I'm aware of the review, not of any outcomes from it.

19 20 21

22 23

24

25

26 27

28 29

30 31

32 33

34

35

36

37 38

39

40

41

42

They will be published, I understand, soon. DR LYONS: But our submission to that review process was that the funding arrangements do need to be altered to reflect the need for greater flexibility and responsiveness to requests for service change, and for the need to drive that integration across the boundaries of the current service systems - in particular, the MBS system and primary care in particular, and the services that we're responsible for. There is a real need for us to explore different ways to support those changes in clinical care, because our reflection would be that activity based funding has driven activity within the services that are funded under those arrangements, and that is driving activity into hospitals, and that is not necessarily the best place for providing care given the demography of our population now, particularly with the increasing occurrences of chronic conditions and people living in the community and trying to keep them well in those settings. So we need to shift the focus and change the axis of care to be more around what's available in the community, rather than - I mean, the hospitals are still very important and we need to maintain those, but we need to start to shift the focus to that care being provided differently.

43 44 45

46 47 THE COMMISSIONER: And fee for service or activity based funding works perfectly well, in fact really well, for certain conditions or injuries or types of acute care, but

not necessarily for the sorts of things you were describing where people might have complex care needs and comorbidities and need integrated care and a range of different medical health professionals assisting them with their condition, whatever it may be, to get the best health outcome for everyone and keeping them out of the hospital system.

DR LYONS: That's absolutely correct, Commissioner. Activity based funding and fee for service is more around episodic care. We're now talking about ongoing care, not just by an individual but by a multidisciplinary team.

 So it is not just the funding. We would argue there is a whole range - policy needs to change; information systems need to be connected up to allow that to occur much more effectively. So there is a range of things that need to be all in place to support that shift.

DR CHANT: Even, for instance, in an episodic dimension of care, we may need to provide more wrap-around services for someone even in that single episode of care.

THE COMMISSIONER: Yes, I might have come in for an acute condition, I have a toe infection, but the toe infection is because I'm obese and I can't bend over --

 DR CHANT: That's right, and you have no-one coming in to give your food, you are food insecure, we need to arrange Meals on Wheels or family supports; we need to get you connected in community; we need to understand your context. So if we are truly going to address it equity wise, those intangibles - the light is not shone on that important work that is done often in our health systems to support those outcomes.

THE COMMISSIONER: Yes, so - no doubt this happens all the time - you could go into hospital because there is a particular problem you have that needs acute care, but there still might be aspects of treating that patient that are preventative as well.

 DR CHANT: That's correct. That's correct. And I think you have probably read, through our submission, that we really support a competent and comprehensive primary care system, but for some of the patients that are connecting with us, they perhaps at that point in time haven't got

a primary care provider, and we do need to stabilise them, work with it and then put effort in connecting them to the right primary health care provider for them, and that again takes time.

THE COMMISSIONER: That's a big gap for preventative care because it can't all be the public hospital system that is engaged in preventative care. Ideally, it's actually probably more the majority either GPs, primary care, or community health centres or whatever.

DR CHANT: That's correct. General practice is probably where we would see the bulk of prevention happen, in that sort of primary/secondary prevention. However, we know that we have an important enabling role in that and there will be some patient groups that have very close ties to us or are seeing us because they feel safe, and we do need to, in the end, link them to primary care. That would be our objective. But we may need to provide more comprehensive care to them during that journey of connection.

MR GLOVER: In paragraph 12, Dr Lyons, in the second sentence, just by way of clarification, it says:

ABF uses a unit price ...

Is that the national efficient price that is being referred to there?

DR LYONS: The national efficient price is for the funding received from the Commonwealth. There is also a state efficient price.

MR GLOVER: We will come to that.

DR LYONS: So in relation to the funding from the state to our local health districts for their hospital services, it's determined by the state efficient price.

MR GLOVER: But at the Commonwealth to state level, it's the national efficient price; is that correct?

DR LYONS: Correct.

 MR GLOVER: In paragraph 13, the concept of the NWAU is introduced, that we have discussed, but reference is made to a range of adjustments that are applied to account for

the relative cost of treating patient, and some examples are given. How are those adjustors determined?

DR LYONS: They are determined by IHACPA again. They are the people who determine the adjustors and level of the change that is appropriate, and that's based on evidence that needs to be put before IHACPA to demonstrate that increased cost, and that's reflective of a certain patient group.

MR GLOVER: And are they under constant review?

DR LYONS: They are. They are able to be reviewed. We can put forward for consideration what we believe might be certain patient cohorts that are increased cost to us.

For instance, I think six or seven years ago we put forward that there were a lot of culturally and linguistically diverse patients that we were caring for, and I think there was a joint submission from New South Wales and Victoria who both were of the view that they were seeing increased costs for providing for those patient groups.

IHACPA considered it but declined to make an adjustment because they didn't believe there was enough evidence to quantify the impact, but there is an opportunity for us to continually reassess those and make further submissions around different groups as we see the need.

MR GLOVER: Building perhaps from that last answer, how effective are the adjustors in capturing the relative costs in those circumstances?

DR LYONS: I think they reflect the additional costs. For instance, for children, there is an adjustor for children, for care for children, and we know that there is increased cost in providing care for children, just by the nature of the way the care needs to be provided. So there are always arguments that they don't go far enough, but I think they reflect that there is increased resource consumption in providing for different patient groups and it is considered appropriate that they be adjusted to reflect that.

MR GLOVER: Although I take it, based on the submission made a few years ago, the view would be that there should

be perhaps some others added to the system; is that right?

 DR LYONS: There are always groups that our services will argue cost them more to provide care for, so it is about looking at what level of evidence we have for that and making appropriate adjustments based on the evidence that we have.

MR GLOVER: Ms Willcox, did you wish to add anything?

 MS WILLCOX: I think probably the other, dare I say, barrier around some of this work is - I mean, it is very complicated and technical, but there is also a long lag time for some of this work, which, when you are working with clinicians and they are innovating and changing models of care and we are under constant pressure and demand and managing our resources the best we can, having a more expedited mechanism to capture data and make the necessary changes - there will always be debate and negotiation, I expect, between an organisation like IHACPA and the states and territories to strike the right balance of what is in scope and what isn't. But I think from our perspective, there is a limiting factor around the innovation, models of care, hospital avoidance and the things that we're doing outside of the walls of the hospital, as Dr Lyons said, that they are not able to capture and attend to at the pace that probably the states and territories would desire.

MR GLOVER: Is that a lag through the application process to IHACPA or gathering the data necessary internally in NSW Health?

MS WILLCOX: I'm probably not best placed to answer all the technical steps, but I think it is probably a combination of what data is required and then time taken to evaluate and assess and test internally for IHACPA, I expect.

DR LYONS: Yes.

MR GLOVER: Just before we move on, Dr Lyons, I would just like to step through, in general terms, the process that is undertaken that leads to the determination of the Commonwealth funding contribution in any given year. So how does that process start from the state level? What information has to be given and how does it flow through to

a funding flow from the Commonwealth?

It comes from decisions that the state makes DR LYONS: about how much activity it can deliver within the resources that it has available to deliver those and through the distribution of those in relation to hospital services versus public health versus dental care or whatever. those decisions are made. They are historically based, usually, so it's usually based on what has occurred the previous year and then adjustments that are reflective of input from the districts around where they see service changes occurring that might drive activity; population growth that we can determine, in terms of population projections; new capital builds, which might have an implication for the amount of service that is provided and the cost of providing that service. Those are all fed into a process of consideration.

There is a process that we undertake with the local health districts that occurs from around November through to February/March of each year in the lead-up to the state budget, where those negotiations and discussions are had.

As we get closer to the budget and are clear around what budget we receive for our state health budget, those agreements firm up and the level of activity is agreed for the next year. So it is an annualised agreement of activity. That then feeds into information that is provided to the Commonwealth.

MR GLOVER: Just before you go on to that step, those activity levels are reflected in the service agreements, are they?

DR LYONS: They are, and they're rolled up to the state level and they'll be in the service streams of emergency department activity, acute admissions, inpatient activity, sub-acute and non-acute activity, for things like rehabilitation, palliative care, and so forth. So there are a range of service streams that all bundle up and have their own different classification systems.

MR GLOVER: Are they expressed as multiples of NWAU?

 DR LYONS: They are, indeed. So once that is struck and agreed at the state level and rolled up, it is then provided to the Commonwealth as the basis on which the

Commonwealth contribution will be provided to the state and to the local health districts.

MR GLOVER: At that stage, they're still estimates because we're looking forward?

 DR LYONS: They are estimates that are agreed. What happens is that the Commonwealth pays on the basis of those estimates, as does the state. So we don't pay on actuals during the course of the year. The districts receive the funding flow based on the assessment of what the annualised target will be, and then there's a reconciliation at the end of the year around the actuals.

MR GLOVER: What happens as part of that reconciliation process?

DR LYONS: That reconciliation process takes some time because it relies on coded information around all of the activity within that financial year being made available, then being assessed by the funding administrator and the national funding body, and any technical adjustments being made and agreements what the Commonwealth is then in-scope for to be provided to the state. So it can be actually 12 months after the end of the financial year, and that then is either a positive contribution from the Commonwealth to the state for that activity, if it was over what the assessment was and it is still within the 6.5 per cent cap, or it will be a requirement to provide funding back to the Commonwealth because we were under target.

MR GLOVER: If there is an adjustment that sees funding going back, is it actually a transfer of funds or is it merely taken into account in the next funding cycle?

DR LYONS: It is not a transfer of funds from the health system because that financial year has well and truly gone. So it would be between treasury, if there is an exchange - and I'm not an expert in how that occurs and to what extent it occurs, so --

MR GLOVER: That's fine. In that answer you referred to provision of coded activity. What is that?

DR LYONS: That's the activity that has been undertaken but we're required to clinical code it so that it can be

classified appropriately under the arrangement for classification system. So DRGs for diagnostic related groups for inpatient care, but there are a range of different classification systems for emergency department activity and for sub-acute, non-acute care - they all needed to be coded and that gives the appropriate weighting of that activity so that it reflects the resources consumed.

MR GLOVER: What you're describing there is records of actual activity undertaken in the relevant services; is that right?

DR LYONS: That's correct, and we need to have evidence of that and be able to have it audited so that it has actually been delivered.

MR GLOVER: Is that an important function within the LHD or specialty health network?

DR LYONS: It is an important function, a very important function, to make sure that we capture activity, first and foremost, for all of those things that we do, but then accurately code the activity to ensure that we're getting the appropriate funding for the resources that are consumed in delivering that care.

MR GLOVER: When you say "accurately code", why is that a particularly important piece of the puzzle?

DR LYONS: Because that determines what funding we receive not only out of the state pool but also the Commonwealth pool, and it appropriately reflects, then - it should appropriately reflect the cost of delivering that care as well. So if it's not coded effectively, then there may have been more resources consumed in delivering that care, but the funding received won't match the care delivered.

MR GLOVER: In paragraph 14, you describe what I might call the cut-off for eligibility for activity based funding, and the process that you've just described, Dr Lyons, that relates to activity based funding; is that right?

DR LYONS: That's correct.

MR GLOVER: Block funding is dealt with slightly

differently?

DR LYONS: It is.

MR GLOVER: We'll come that that. The cut-offs, that is 3,500 total NWAU per annum or 1,800 admitted patient NWAU per annum - is there a difference between a total NWAU and an admitted patient NWAU?

DR LYONS: The rural hospitals might have a range of different services being provided within that hospital, so it might be a combination of inpatient NWAU, outpatient NWAU, emergency department NWAU, sub-acute NWAU. So the total is looked at for those. In the metropolitan hospitals it has to be admitted patient NWAU.

MR GLOVER: Are these NWAU levels the only measure for determining whether a facility would be block funded or funded under ABF-type arrangements?

DR LYONS: Not the only consideration. I think we have a couple of specialty hospitals that because of the discrete nature of the services they provide are considered not to be appropriate for activity based funding, because what they provide is very narrow. I'm thinking of the Sydney Eye Hospital as an example, because it is primarily around a certain type of patient. It's not considered that it would be appropriate to fund that under an activity based funding model because it doesn't have the range of patients. It's very discrete and defined about what it does.

But most of the hospitals, what has been done is an assessment around the cut-off between when activity based funding - that there's enough activity to cover the costs of keeping that service open, so the fixed costs of providing that service, and the level of activity going through it that will enable it to be supported for its fixed cost and the activity, versus a hospital where the fixed costs are such that if you paid them under activity they wouldn't get enough money to keep the service operating. There's a technical process that's done to assess that across the state.

MR GLOVER: Do the particular districts in which those facilities sit - are they involved in that process?

 DR LYONS: Absolutely. The information comes from them.

1 2 3

MR GLOVER: Can they make a submission or an argument as to which funding model should be adopted?

4 5 6

7

8

DR LYONS: They can, and I think that's a process that has been undertaken between the ministry and the local health districts and we've struck these definitions based on the feedback and the assessments.

9 10 11

MR GLOVER: And do facilities that receive ABF funding also receive block funding?

12 13 14

15

16

17

18 19

20

21

22 23

24

DR LYONS: They may receive block funding for certain programs. It depends on what they provide. I think if you look at our state budget. I think around 70 per cent of the total budget we provide is in the activity based funding category, around 20 per cent I think is in block. there's some other components around different programs, health protection, public health, those sorts of things, that might be independent of that again. So you can actually receive activity based funding and block funding for certain things, depending on what service you're providing, what programs, and what we are asking to be delivered from those sites.

252627

MR GLOVER: Ms Willcox, do you wish to add anything?

28 29

30

31

32 33

34

35

36

37

38 39

40

41

42

MS WILLCOX: I might just go back to the matter of clinical coding to elaborate on what Dr Lyons said. We are very reliant on our clinical staff who are attending to the medical records, they're seeing the patient and they're documenting what care or intervention they've undertaken. And part of the technical complexity of this work is from time to time the language that is required changes, so you need to refresh the education and work with your For instance, it may be that someone with clinicians. a low potassium, if it's written as "low potassium", doesn't attract the same amount of NWAU as if you write "hyperkalaemia", which is the technical term for low So these definitional changes can impact on potassium. what amount of activity is actually gathered to truly reflect the patient episode of care that is being provided.

43 44 45

> 46 47

So a lot of our hospitals have clinical-coding people that go around and work with medical officers in particular, JMOs, to assist them to appropriately document

what work they're doing with a patient so that we optimise what we capture. As Dr Lyons said, the process by our coders is they run through the medical records and gather all of that, check back with clinicians if they have questions, and it's audited on a regular basis to make sure that that's all being done appropriately. But I think it's important to know that the JMO, the clinical nurse consultant, the allied health professional, all the way through, are entering records, contributing to this body of work and for us to optimise the capture.

10 11 12

1

3

4 5

6

7

8

9

MR GLOVER: Thank you.

13 14

15

16 17 In paragraph 16, block funding is described. And in the second sentence, block funding is informed by health service costing data plus escalation. Can you just describe that process, please, Dr Lyons?

18 19

20

21

22 23

24

25

26 27

28 29

30 31

32

33

DR LYONS: In identifying the block funding, we go through a costing process each year to assess the cost of providing a service in different settings. That's where this issue around the thresholds for block funding for activity for the hospitals is struck, based on the different levels of activity and the costs of providing that care. there's a decision made that block funding is appropriate for that service, rather than having a process with negotiation around that, the previous block funding is provided plus an appropriate escalation that reflects the escalation of what might go into ABF. So if there's increase for salaries and wages, that goes in at the percentage increase for salaries and wages. If there's an increase for goods and services at a certain level, then that flows through in the block funding as it would in the ABF.

34 35 36

MR GLOVER: And again at the Commonwealth to state level, subject to the Commonwealth growth cap?

37 38 39

DR LYONS: That's correct.

40 41

42 43 MR GLOVER: Picking up on your last point, Ms Willcox, if a facility received entirely block funding, so a small rural facility, does it still need to capture its activity in that coding mechanism?

44 45 46

47

MS WILLCOX: I might need to confer. Dr Lyons, I presume it does.

DR LYONS: It does. Yes, it does. That's how we come up with the thresholds. It is still required to capture activity.

MR GLOVER: Is that a convenient time, Commissioner?

THE COMMISSIONER: It is, yes. We will adjourn until 2 o'clock.

LUNCHEON ADJOURNMENT

THE COMMISSIONER: Yes, Mr Glover.

 MR GLOVER: Ms Willcox, just before lunch you were making reference to the importance of coding and the involvement of a number of coders and clinicians in that process. I take it that across the state there is a need for that process to be undertaken at a consistent level, would that be right?

MS WILLCOX: That would be right, yes.

MR GLOVER: Is there anything that either is being undertaken or can be undertaken from the ministry level to ensure that that happens?

 MS WILLCOX: I think the education and training of staff is something that we can assist from, from the centre, and I may have this correct, that HETI, I do think, undertakes some clinical coding training modules that are available for staff.

There are always difficulties in more rural and remote areas in terms of acquiring people with the requisite skills, so I think as much support as we can give from the centre is very, very important

 The clinical coding workforce itself tends to be a fairly sparse, they're a hard group to recruit to, it's a very specialist set of skills. The people who do coding are often very highly sought after by insurance companies and medical defence unions and the like, so competing with the private sector remains an ongoing challenge for the health system.

We've looked at some workforce opportunities for

clinical coding staff, opportunities to work from home, which now is not such a feature at all since COVID, but prior to that it probably was a fairly novel flexibility in the workplace that wasn't commonly used. So I think in summary, there's probably some workforce support and some training and education that, from the centre, we can assist those staff who are providing that service.

MR GLOVER: Does the ministry undertake any assessment of how well activity is captured across the network?

 MS WILLCOX: Dr Lyons might assist me with this, but the audit process is a key one to make sure that what is being captured in the record is being accurately represented in the coding that is then submitted as part of our funding submissions.

 The clinical coding support teams that are present in a number of hospitals - I wouldn't say they were in all hospitals but many of our larger hospitals - are there to provide that support and education, in particular to our junior medical staff, and that would contribute to ensuring some consistency and a bit of standardisation of how things are reported and recorded in the record.

MR GLOVER: Dr Lyons?

DR LYONS: I have nothing further to add.

MR GLOVER: If we can go back to the joint report, please, and in particular, paragraph 18, there reference is made to some time-limited national partnership agreements. Can you give me an example of such an agreement, Dr Lyons?

DR LYONS: Certainly. So there are agreements in place at the moment, for instance, there's a bilateral around mental health, that the Commonwealth indicated that they would provide some additional funds to the state for specific components of delivering different mental health services. So that's an example of a national partnership or a bilateral agreement. Some of them are bilateral, some of them are multilateral; it depends on how they're negotiated. But usually the Commonwealth tries to get as much consistency across the states and territories as it possibly can.

Some other examples are palliative care. We've had

a national partnership agreement for palliative care. And dental services is one that has historically been in place.

The issue with these, when they are time limited, they create a problem because as we come towards the end of the agreement, there is no certainty of ongoing funding. So then it becomes an issue around how are those services, which are often very important services delivering care, going to be maintained if they are not going to be continued to be supported by the Commonwealth through a partnership arrangement?

What we have flagged under the previous National Health Reform Agreement negotiations is there needs to be a negotiation in advance, a very clear warning around what's happening with these partnership agreements as they come to their conclusion, to give certainty to the states and territories around how they continue to provide those services.

MR GLOVER: When you speak of "time limited", what sort of periods do these agreements cover?

DR LYONS: Five years is usually the sort of historical arrangement.

MS WILLCOX: Three to five, yes.

DR LYONS: Three to five, yes.

MR GLOVER: Is the funding provided under them quarantined in some way - that is, it must be spent on the purpose?

DR LYONS: It is. It needs to be directed towards the specific requirements that are documented within the agreement around the services that they're directed to.

MR GLOVER: How is that administered by the ministry?

DR LYONS: The ministry will receive the partnership agreement then, through the same process we use for services with the districts, decide on how that is to be split and how to be allocated across the local health districts. That then becomes part of the budget that's allocated to the districts to provide their services.

DR CHANT: Perhaps I could just clarify in relation to

dental, there have been periodic national partnership agreements related to dental, and just to echo Dr Lyons' comments, that it does introduce many inefficiencies, if we cannot recruit long-term staff, particularly into our rural and regional. It provides a challenge for ongoing retention; when there's uncertainty, staff will leave and move. So really having that sustainable funding.

From a policy perspective, we also see dental as a core component of health services. We provide a safety net service and provide services to those that are eligible, which is largely pensioners and those that are health care card holders, but we do see the Commonwealth having a key role in partnering with us in terms of that safety net system for dental.

Under the NPA, they will set a particular activity target and this is probably an example where I mentioned before a dental weighted activity unit.

MR GLOVER: Yes.

DR CHANT: That's a similar premise to the NWAU, where it's basically saying one episode, it might be it's 1, and then if it's more complex, it's 1.5. They specify the amount of activity lift they want to see from the states, so there's a baseline, they want to see an activity lift and a demonstration of that, and then we get paid if we achieve those activity targets.

We distribute that activity in a service agreement, so it will be reflected in the service agreement to each of the local health districts, and then we monitor that centrally. We have a statewide data system called Titanium, and we're able to track that activity by our districts through the performance structures.

MR GLOVER: Ms Willcox, do you wish to add anything?

MS WILLCOX: No, I don't think so, thank you.

MR GLOVER: The other type of funding, if I can describe it as that, under the NHRA, is labelled "public health funding". What sort of initiatives or activities does that funding relate to?

DR CHANT: There is some particular partnership agreement,

such as for the NPA for immunisation, so the Commonwealth procures vaccines on behalf of the states and territories and the states then do the distribution. That distribution occurs to pharmacies and general practice and also then to our own health district distributions. So that's an example of an NPA in that public health stream.

Then there has also been - you would have to help me here, Nigel - historically, some rolled funding around prevention that has come to the states from the Commonwealth.

DR LYONS: I can't remember the details specifically but, yes, it has been rolled up.

DR CHANT: Then there's particular funding for different programs, which sits outside the national partnership agreements around Breast Screen and some of the other Commonwealth screening programs.

 MR GLOVER: Thank you. Paragraphs 19 to 31 of the report deal with the allocation of funds within the state - that is, by treasury and then the ministry out to the services; is that right?

DR LYONS: That's correct.

 MR GLOVER: In paragraph 23 - and all these questions in this little section are in that context, that is, this is the allocation of the state funding - it's referred to as a "growth funding model", and it's described as being put in place to provide greater funding certainty and improve the sustainability of growth. How does that model achieve that outcome?

 DR LYONS: It provides certainty about likely budgets to be allocated to health from the state. So there's the annual budget cycle where it's firmed-up, but then in the forwards, the outer years of the budget cycle, there's an indication of the budget that will be received by health, and it's reflected in the past, that historical 4 to 5 per cent growth over the last eight, 10 years, and that has given certainty because what it has allowed the health system to - while it's always to be firmed-up the next year, it's not absolute, it gives a likely indication of the ongoing funding to flow and allows the state to be confident that the services it initiates reflecting the

budgets that are allocated this year will be able to be sustained into the future. Because if there was growth that was a smaller amount than perhaps salaries and wages agreements in terms of increments, or the likely CPIs, further savings would need to be found that might then impinge on the ability to deliver services.

So it gives that sense of certainty around what is likely to flow and allows the confidence in the system to establish services on a sustainable footing, because one of the worst things that can happen in health is trying to establish a service with a lack of certainty about ongoing funding. It's a challenge to recruit and retain the staff with the appropriate skills and the right environments to deliver those services if there's no certainty about ongoing employment.

 MR GLOVER: One of the challenges that we've heard about at district level is related to that - that is, the yearly funding cycle presents some challenges in forward planning. Does what you've described go some way to meeting those challenges?

DR LYONS: In part, and what follows from that is if the state system has got the certainty about likely future allocations, the districts should have confidence that the allocations they receive should be at least in the ballpark to maintain, if not grow, services over time. And it gives the districts that certainty as well.

It's important, though, to reflect that sometimes, we are asked to look at efficiencies, because the demand that comes to our services and the cost of providing those services can grow at a rate which is higher than the funds that are received, and, in fact, demand and complexity of care and the workforce costs can outstrip even the increase in funds that are coming. So most managers who work in public health are always looking for better and more efficient ways of delivering care, to look at ways that savings can be delivered safely at high quality so they can continue to meet the demands on their service.

 That's an ongoing cycle that you see across all of public health, and it has been the same for as long as I have worked in public health; it's always there. There's an underlying requirement really that we're always looking to do things differently and better to make the best of the

resources we receive and optimise the care we can provide.

MR GLOVER: Moving ahead to paragraph 29 in the report, it's stated there that market trends indicate a growing requirement to move asset acquisitions to long-term service delivery arrangements, and that "this is significant change with capital budgets being transitioned to operating budgets". What do you mean by that?

DR LYONS: Examples of this would be major capital equipment, so things like large pieces of diagnostic imaging that traditionally may have been bought through capital but are now through operating leases, and there's an ongoing requirement then that funds are found out of the operating budget.

The other examples are in ICT. That's an increasing trend in information technology and software to move from purchasing it outright to having an ongoing arrangement for annual payments. So those are both big shifts in terms of movements that were historically capital based into the operating budgets, which then is a challenge for the districts to find, with all of the other pressures, because it's additional over and above what they're used to paying within their operating expenses.

 MR GLOVER: Paragraph 30 and the diagram immediately below - do I understand that to be describing the process of setting the targets and budgets within the service agreement process between the ministry - sorry, the secretary and the LHDs and specialty networks; is that the flow?

DR LYONS: That's correct.

MR GLOVER: How, at a general level, are the activity targets in that process developed and worked out at the individual LHD level?

DR LYONS: As it says in the baseline there, the starting point is the previous year, and it is the previous year's actuals, not the previous year's target. However, the target that was set for that year will be looked at in the context of if the activity wasn't met, there would need to be an explanation around the circumstances and why that wasn't met.

 What would be looked at there is the performance of the district as well in terms of some of the other components that relate to activity being delivered. So, for instance, were emergency departments performing well in terms of access? Were electives, the booked surgery targets, the planned surgery targets, met for different categories of patients? Because if the activity wasn't performed, that can flow through into poorer performance on some of the KPIs. So that would be looked at.

9 10 11

12

13

14 15

16 17

18 19

1

3

4 5

6

7

8

Then on the basis of the actuals, there will be a discussion around what is the forecast for the next 12 months? So a lot of that is input from the districts around the things that they see are likely to be changing for them, and that would include population trends, demographic changes, service delivery changes, in particular if they've a new capital development coming online, and what that would mean in terms of activity. So that becomes the baseline negotiations and that's a discussion that is had.

212223

24

25

26 27

28

29

30 31

32

33

34

35

36

37

38 39

40

41

42 43

44

20

Then there are issues around the growth component, and that comes out of the submissions that the district makes, and the ministry assesses those as well and assesses across the state to look at those trends and what it means in terms of the total budget that's likely to be available and then looks at addressing any issues around equity, so are there some factors that are put forward and can be evidenced that demonstrate that there is an issue around equity in terms of the ability for groups to be able to access care? Population, ageing trends, all those demographic trends that we said before, all factor into the Then the adjustors get looked at and those are the things that might then ameliorate the growth in some way. For instance, unplanned re-admissions - that is an example of where, depending on the rate of re-admissions that are not expected for services in that district, if they're higher than the state would anticipate, there may be an incentive to the district to try and reduce those unplanned re-admissions, because that's not good quality care; it suggests that when the patient has been discharged from the hospital, the transfer of care into the community hasn't been supported adequately and they haven't been maintained adequately because they have deteriorated and needed to be readmitted.

45 46 47

MR GLOVER: How is that incentive delivered through this

process?

DR LYONS: So that can be through purchasing adjustors. For instance, the ministry might say, "We are not prepared to pay for all of your unplanned re-admissions, because there's a need for you to reduce those, so some of them may not be in the activity targets." Other solutions need to be found around how the re-admissions are reduced and there might be an agreement about what needs to be put in place and how that is supported. But that is an example of where there's a shift through the negotiation to say, "Well, something needs to change, and we're not prepared to continue to pay for things that are unplanned and should be cared for in other ways.

 So again another area is potentially preventable hospitalisations. There's a series of clinical conditions where there is a view that care for those conditions is appropriate in the community and they should not need to be admitted to hospital. If they are being admitted to hospital, why is that? Why are we paying for them to be admitted to hospital? Perhaps there's a process around how the adjustments to activity are made to reflect that that shift needs to occur.

MR GLOVER: So they might be adjustments down?

DR LYONS: They may be adjustments down.

MR GLOVER: Are there adjustments that might be upward?

DR LYONS: Yes, there might be; there might be agreements around the establishment of a new service. So we've talked about virtual care and telehealth. There may be an agreement that we're going to move and shift a service from being delivered in a certain way to another way, and certainly moves to deliver care in community settings are very strongly supported because that's in line with the future directions of health in taking pressure away from hospitals. So if the districts have initiatives around service changes they want to make that reflect those care changes that are in line with where the system would see those important changes occurring as well, they may be supported by additional activity being purchased to reflect that new service delivery model.

MR GLOVER: Is it really through these adjustors that

incentives to drive strategy developed by the centre are implemented through the networks, the districts and the networks?

DR LYONS: They are certainly one of the levers. Purchasing can be one of the levers to support that, along with planning and policy and other data and information KPIs. So, yes, absolutely, it is one of the levers the centre has to negotiate those shifts in the way care is delivered.

MR GLOVER: The last factor in that diagram is the specific factors, and we've heard some evidence about supra LHD services. What other types of matters are taken into account at that level?

DR LYONS: Supra LHD are services that might be provided for a number of different local health districts. The statewide services is where a district hosts, say, service for the whole of the state, so they're the two distinctions there, and both have different appropriate funding provided to support their activity.

Highly specialised services might be services that are consolidated in only a certain number of places around the state because they're very expensive and because the capability of the staff to provide those and the teams and the technology to support them can't be replicated everywhere.

MR GLOVER: Some of the examples of highly specialised care you gave earlier today.

DR LYONS: Yes, yes. So those are examples of where there would be specific things that would be included into the service agreement, and then all of those are added together, and you can see the pluses or minuses on the adjustors and specific factors there.

MR GLOVER: Yes.

DR LYONS: Then, ultimately, the activity targets are struck and the budget that will be provided to deliver those is agreed, and that becomes the basis of the service agreement.

MR GLOVER: And those activity targets, as we discussed

earlier, are the ones that are fed into the Commonwealth funding arrangements as part of the overall state activity estimate; is that right?

DR LYONS: That's correct.

MR GLOVER: Ms Willcox, did you have anything to add to that?

MS WILLCOX: No, I don't think so. I think that's fine, thank you.

MR GLOVER: Those activity targets or arrangements having been set in the service agreement, what would happen if the district exceeded them in any given year?

DR LYONS: I think there's a tolerance of 2 per cent on the service agreements, so if a district was tracking towards being over that, I mean - so it is not a "set and forget" arrangement, there is ongoing discussion between the ministry and the district; at least quarterly meetings, depending on the level that the district - that is in the performance framework; they may be more frequent than that if there are concerns around performance. Those issues are monitored very closely and if there is a material change likely, then discussions would be had around what's the basis for that, if there's an explanation for it - is it able to be supported, is there action required to change it, if that's possible to do? So those are ongoing discussions between the ministry and the district.

MR GLOVER: When you say "is it able to be supported", does that mean in a funding sense?

DR LYONS: Correct.

MR GLOVER: We might just have a look at an example of how this is expressed in the service agreement.

This is document [SCI.0002.0013.0001] Commissioner. In the hard copy, you'll find it in volume 6 at tab 47. It is the one we went to earlier. If we can go to page 13 of the document - the coded page 13 - so this is headed "State Outcome Budget Schedule". Is this where we see these targets, at least in summary form --

DR LYONS: It is.

MR GLOVER: -- being expressed?

DR LYONS: It is.

MR GLOVER: Then a reference you made earlier to the state efficient price is at the top of that table there?

DR LYONS: That's correct.

MR GLOVER: What is the purpose of the state efficient price in this process?

 DR LYONS: So the state efficient price is the level of funding that the state sets for funding to the districts for the activity that's purchased. It's a reflection of the cost of providing services in New South Wales, and if you look at the comparisons on the basis of NWAU and the cost of delivering those NWAU across the country, there's variations I talked about before.

New South Wales is probably I think the second most efficient, I think, in terms of price. Now, to continue to drive efficiency within the system and to maximise the amount of treatment we can provide within the resources we have, the state sets a state efficient price which looks to drive the best, most optimal amount of volume of activity we can purchase within the resources we have. So it looks to set the state efficient price under the national efficient price, and actually under the average - that is, the cost of providing services across the state. It looks at where care is being delivered most optimally within the resources and tries to drive the system towards that.

MR GLOVER: How does that affect those parts of the state that have challenges like regionality or remoteness in delivery of care?

 DR LYONS: They have adjustors that give them a higher level of funding to reflect those challenges, and that's agreed, because there's an agreement that those costs are there and aren't able to be delivered. But the state efficient price is there to really support and drive as much activity as we possibly can within the resources we have available and the adjustors for the places that can't achieve that are added on so that they reflect the additional costs.

MR GLOVER: Earlier in your answer you said one of the purposes of it was to drive efficiency.

DR LYONS: Yes.

MR GLOVER: How does the use of the state efficient price drive efficiency?

The funding that's being received - it's part of DR LYONS: this challenge we have in public health of how do we provide as much care as we possibly can within the So by setting the state price at an efficient resources? level, the volume of activity expected is higher than what would be under the national efficient price, and it allows the system to deliver more care and potentially meet those higher demands that we see coming through our system each So it's an attempt of using funding as one of the levers to support people looking for new ways and innovative ways to deliver services, maintain their quality at the highest possible level and keep that sustained, but look for more efficient and effective ways of delivering that treatment.

MR GLOVER: How well does it operate in practice?

DR LYONS: Well, if you look at the state health system by comparison with any of the other state and territory health systems, we are highly performing, I think, in terms of the measures that are looked at nationally; in terms of access, in terms of emergency department throughput; in terms of emergency and planned surgery activity within the clinical category waiting times; the cost of care; the adverse events - all of those we perform at a very high level and at second-lowest cost.

The BHI - I think we provided this in one of our submissions earlier - did an assessment of all the developed health systems around the world in the OECD and looked at the per capita cost of delivering services and potential life years lost by the community in those settings and those countries, and New South Wales and Australia performed very well, but New South Wales performs exceedingly well when you look at the per capita spend and the potential life years lost for people from dying early from conditions that they otherwise might be treated for.

 So that gives us a sense, when you do those comparisons, that the system is actually operating very well. It's maintaining services and doing that efficiently and effectively, and the outcomes for our community, at least at that highest level, are very good.

Now, that doesn't mean that there aren't issues within different cohorts and populations that we need to continue to strive to address, and we are committed to do that, but when you look at the system in totality, it performs very well.

MR GLOVER: If we can go ahead to page 16 in that document.

THE COMMISSIONER: The per capita spend and the state efficient price, one of the inputs in that is what health workers are paid; right?

DR LYONS: Partly. That is one of the drivers. Certainly that would explain, Commissioner, the difference between some of the other jurisdictions about the relative rates of pay, but not just the rates of pay, it will be the industrial arrangements and how staffing is organised.

THE COMMISSIONER: Yes.

MR GLOVER: Page 16, just by way of clarification, is this the summary of the estimates for the Commonwealth funding purpose? That is, this is the estimate that feeds in to the overall state estimate for the purpose of determining the Commonwealth funding contribution?

DR LYONS: That's correct.

 MR GLOVER: We see there in relation to this LHD, in-scope for Commonwealth and state NHRA contributions total - the Commonwealth contribution is about 39.5 per cent, in the middle there, overall?

DR LYONS: Yes.

MR GLOVER: Has any assessment been done as to the level of Commonwealth contribution overall to public hospital services in the state?

DR LYONS: It has, and when we first started, if my memory

serves me correctly, I think we were around about 38 per cent Commonwealth contribution when NHRA was introduced and activity based funding was introduced. So that was the base. And with the 45 per cent contribution on growth, I think we're up to 42 - 38.6, sorry, 38.6, I've just been corrected by my colleague, who has the most recent information. So we are slowly increasing, but given that the 45 per cent contribution is only on growth and the base is unaddressed, it will take many years for us to get to a higher level of contribution from the Commonwealth.

THE COMMISSIONER: It takes 80 years to get to 45 per cent, I think, Commonwealth contribution. That's what I have read somewhere, I'm sure.

DR LYONS: That's correct, Commissioner. I think the assessment is it will be about 80 years to get to the 45 per cent.

THE COMMISSIONER: What was the breakdown before - and if you don't know, it doesn't matter, but what was the breakdown before ABF was introduced?

DR LYONS: I think it was around 38 per cent. That's my recollection. I will have that confirmed but I think it's in that ballpark.

 MR GLOVER: Just going back to an answer you gave earlier about the adjustors in this process, and you used hospital-acquired complications as one, if that's an adjustor that may see a downward effect on the funding that is received by the LHD, might that, on one view, pose some difficulties in the district in actually addressing that issue, that is, the hospital-acquired complications issue?

DR LYONS: Yes, I mean, the hospital-acquired complications one is one that is a national agreement, because the Commonwealth doesn't pay for hospital-acquired complications either, so it's a reflection of the national funding arrangements, flowed through to the districts.

 Absolutely, you could argue that if you're providing less money, perhaps it's difficult, but in totality these are not huge adjustments to the budgets, but they are to reflect that price signal around quality that the Commonwealth would like to see flow through to the hospitals.

DR CHANT: Perhaps it's important to say that you're looking at it from a funding stream concurrent with the fact that hospital-acquired infections might be higher in a particular district, that will be picked up under the performance review; the Clinical Excellence Commission sits on the - our CEC sits on the performance reviews and there will be a program of work designed to work and support the district to understand what's driving those infections or other complications and what has worked in other districts and really sharing, to actually support the district. That's one of the key roles of the pillar organisations, and particularly our Clinical Excellence Commission, in the domain of quality and safety.

MR GLOVER: Ms Willcox?

Dr Chant really said what I was intending to MS WILLCOX: I think it's important to note that these are discussions that happen at a formal performance level and the frequency of those will be determined in terms of the But if an LHD is relative performance of the district. concerned about particularly a quality and safety measure, it's frequent that those teams would escalate and have some discussions with the Clinical Excellence Commission, for one, but most certainly as part of our due diligence in the ministry, we would then ask the appropriate representative from the ministry to attend the performance meeting with Suitable papers would be sent in advance so that district. that there would not be a blind-siding of colleagues but really to trigger the discussion and to provide guidance and support around how we might assist them to improve that performance, say it's a hospital-acquired complication or the like.

So, yes, it is an iterative process with an approach to support and decisions around - to Dr Lyons's point, it's not like a hard end with a lot of money taken away from an LHD. We would do a lot of work and try to mitigate that impact, but also to note that the care that is causing complications, whether it's sepsis or longer lengths of stay, is also more expensive, so there is an incentive there to want to do the right thing by the patient, but it's also an optimisation of the district.

MR GLOVER: As part of this process is there a focus on reducing low value care?

Not explicitly. It's being incorporated in more to the discussions now, but the low value care relies on there being good evidence for the care not to be effective or to be consuming resources but of limited value to the patient in terms of better outcomes, or to have good and effective ongoing outcome measurement systems as we talked about earlier.

So where there are explicit things - arthroscopies for arthritis of the knee, for instance - the system is not purchasing that activity anymore for patients on a planned surgery basis, because that is low value care. But other examples of where we might make service change, it is not just around the purchasing. As colleagues have indicated, purchasing is one lever but it's not left to just the It needs to be supported by a whole range of purchasing. other policy, support for change in practice, discussions with clinicians about alternatives, getting those services arranged and set up to support the patients to make sure their needs are being met. So it's not done as a blunt, just not going to purchase; it's got a whole strategy around it usually.

And having used the term myself, what is MR GLOVER: within the concept of low value care?

Low value care, by definition, is care that is DR LYONS: consuming resources, healthcare resources, but without delivering significant benefit to the patient in terms of clinical benefit or outcome.

THE COMMISSIONER: A simple example might be giving antibiotics to someone who has a virus.

DR LYONS: Correct. That's correct, Commissioner. another example might be ordering tests like vitamin D on a frequent basis, where it's not going to change care. there are myriads of examples of things that are being done.

THE COMMISSIONER: It has to be a lot more complex than my example.

DR LYONS: There are plenty of them that are more complex. But the whole concept of value based care is certainly well and truly embedded in the developed healthcare system world now, out of concepts that came out of the US, but value based care is really around looking at the resources that are consumed and what's the clinical outcome, the healthcare outcome for the patient as a result of that and making sure that we're optimally using the resources we have to get the best possible outcome and, if not, adjusting it.

MR GLOVER: Ms Willcox, you described some of the performance framework in terms of assisting an LHD to correct an issue. It is convenient to take you to the health performance framework at that time. The document is [SCI.0001.0007.0001]. Commissioner, you will find this in volume 2 behind tab A11.

Is this the framework that you had in mind when answering those questions a little earlier?

MS WILLCOX: Yes.

 MR GLOVER: If we go to page 10 in that document? There is a description of the performance levels that I think you mentioned.

MS WILLCOX: Mmm.

MR GLOVER: Just in general, practical terms, how does this process play out?

MS WILLCOX: So as part of the reporting that local health districts undertake, they capture performance across finance performance, as in surgery, emergency departments and clinical performance, as well as quality and safety and some workforce measures as well. The ministry has an executive team that is chaired by the secretary with the support of finance and the performance teams who collate responses to the districts' performance inputs, so that we can collectively form a view as to what level a local health district is sitting at or if we have concerns around performance.

 Just to note, though, that there are ongoing discussions with LHDs. This is a quarterly meeting that occurs and not the sum total of dialogue that would be had around a district's performance, particularly if a district was struggling - anything, you know, really from 2, 3, 4, they would find themselves having increased interaction

with the ministry.

That scaling or escalation table that's described there outlines or gives a framework for what is the level of intervention from the ministry or not. So if you are performing on level zero - it's a bit counterintuitive - you're performing the best. People like Kerry, Nigel and I stay clear of you, allow you to get on in your devolved system and do your good work and report as required and escalate as required. Then the hierarchy, as you can see, gets right up to a level 4, where previous attempts to support an LHD have potentially been unsuccessful, recovery is incomplete and that leaves the performance level in a pretty dire situation that may require a more extreme response.

MR GLOVER: Over the page, please. Here we have a general description of the performance recovery process. Does that process involve what you described earlier - that is, engaging with some of the pillar organisations to support the LHD through what it needs to do to recover?

MS WILLCOX: Yes, there could be a potential for a variety of scale of activities that we may implement to support a district. The one that I previously referred to probably is more aligned to a specific change in the - for instance, a health-acquired complication that you've got in that month's report and that you're going to have a discussion with the Clinical Excellence Commission particularly on that measure and implement something directly to deal with it.

 As we get into these performance levels in this quarterly response, you get into a more holistic, I guess, view of where a district is sitting across a range of areas. It's not just about finance, it's not just about quality, it's not just about performance, it's about the totality because we treat all things as equal. So the interventions then may require a pillar to come in to assist, may require somebody external to come in and review the financial operations. Yes, it could be any manner of things, or it might be a combination of events, or in fact might require a team to go in and to actually take a much more interventionist role in the LHD.

MR GLOVER: Thank you.

We'll move now to part 3 of the report, or question 3. That commences at paragraph 59. I think Ms Willcox you have been nominated for these questions. Dr Lyons can relax for a little while

MS WILLCOX: I'm sure he'll want to contribute.

MR GLOVER: In paragraph 62, it states:

NSW Health undertakes a comprehensive, evidence based clinical services planning to ensure current and future services meet the needs of the NSW population.

Can you just describe that process?

MS WILLCOX: Yes, certainly. The planning for the New South Wales health system happens at a number of levels. At a state level, we have planning teams within the ministry and within my division who would look at a population, look at the demographic, ageing, housing, you know, new housing estates, public transport, a whole lot of macro government measures that are occurring that will impact on where a population is and how they may be situated.

They would also connect very strongly with people in Kerry's team, looking at priority populations and some other - I guess we go back to the point of equity, we're looking at some population need issues that would overlay that macro planning.

 At a local health district level, all our local health districts undertake a level of population health planning and clinical service planning. They use data from the ministry to support that, they would use Australian Bureau of Statistics data, local government, a range of inputs, to plan for their local population and understand how they need to - where their services need to be developed, either location or complexity, to do that networking of services that we discussed earlier so that they can actually have the best ability to care for their population, noting that people will flow in to particular districts for particular supra LHD services, but if we just talk locally.

Hospitals and services themselves will then also plan. They will make operational plans out of these more

strategic plans that overlay them locally and from the state level, and they will use that information, drill down in terms as to how they determine how they run their operational services in a community health centre or in a hospital, so that that is supporting the population needs that are being described at a macro level, that that is translating on to the ground with services that are actually being provided. So it's a macro, district, and then a local planning exercise.

9 10 11

1

3

4

5 6

7

8

MR GLOVER: In that answer you referred to "priority populations". What did you mean by that?

12 13 14

15

16

17

18

19

20 21

22 23

24

25

26

MS WILLCOX: Dr Chant may like to add to this, but we would identify those priority populations who one may be their access may be impeded, there may be language barriers, socioeconomic settings, lack of access to primary care, perhaps transport is an issue, where populations are more marginalised, their ability to access care routinely is limited. We know that in our Aboriginal population there's increased co-morbidities and shorter life expectancy, and so we would also, in areas where there was large Aboriginal populations, ensure that those services and partnerships with our Aboriginal controlled health organisations were in place to manage those or support those and partner with those communities. Those would be some of the headline areas.

272829

MR GLOVER: Dr Chant, to you have anything to add to that?

30 31

32 33

34

35

36

37

38

39

40

41

DR CHANT: I think probably just to frame it that priority populations can be probably looked at, at a macro level, and then also related to each disease or condition stream, we might have priority populations. But overall we're looking at populations for which we know the outcomes are not the same, so there are disparities. For instance, it might be homelessness, it may be Aboriginal populations, it may be our prisoner populations. So for those individuals, we might need to add on additional components to their clinical care pathways to achieve those same outcomes. might have to make sure that the front end of our services are very appropriate and tailored to the needs.

42 43 44

45

46 47 We might have to help people connect services. They might have barriers such as transport or be concerned about payment or racism or discrimination. So for many of our populations, we look at our data very closely to determine

who is missing out, where are the gaps, and then do what we can to put in those models of care to support them.

And then we use the term "priority populations" also where we know that the burden of illness is different across our population. For instance, with conditions such as tuberculosis or conditions such as hepatitis B, we know that people coming from culturally and linguistically diverse countries will have a higher burden of that disease. So when we're designing services, we need to have a particular focus on newly arrived migrants or people who have been born in countries overseas. That's more the demographic of trends associated with the nature of those diseases, the epidemiology of those diseases.

MR GLOVER: Is that more done at the macro level or the local level?

DR CHANT: At the macro and the local level. We would have a suite of - many of our program areas would have a range of strategies and those planning documents - I can name a few - we have our hepatitis B plan, our HIV, our STI plan, and each of them will look at where the burden of disease is, where the groups are that particularly might be emerging issues, and that will target our strategies to But that will require us to identify our those responses. priority populations, where we're going to work and, importantly, who we're going to work with and what are the communities we're going to work with. It will be at a macro level but it will also be very much at a local health district level as well.

MS WILLCOX: Probably one simple example of that might be if we look at transport services at a state level to identify where housing might be built or transport runs that might be near our hospitals and services, we also partner with NGOs that provide community transport. So perhaps in a community that we know is a little marginalised, one option to assist them and support access to care would be to partner with an NGO community transport provider to collect those people perhaps from the housing estate, or wherever they're located, to bring them into a community health centre. That's where the macro meets the local.

MR GLOVER: As part of that overall process is there community consultation undertaken?

 MS WILLCOX: Yes. I mean, I think our capability in community consultation is certainly something that's evolved for the better over the past years. In fact, there's almost nothing you would do in public health these days that would not involve the community. Our consumers - we say these things and it's not intended to be a glib comment - are truly our partners in what we do.

COVID taught us many things, but that connection with community, I think, was one of the most profound things that emerged, in terms of knowing our communities, understanding many of the cultural groups that perhaps we didn't have inroads with or relationships with. So building these partnerships enables us to go to community and talk about what they want and how we build services around them and with them.

In the rural and regional, some of the place-making work that has been done in a number of our rural communities is also showing great gains, and that's working with community leaders, local government, community and NGOs and health and making decisions around what types of services do you need in this area, you know.

MR GLOVER: Did you describe that as "place-making work"?

MS WILLCOX: Yes.

MR GLOVER: What does that mean?

MS WILLCOX: It is not intended to be jingoistic, but it's about really bringing who are all the relevant people in a community together to collectively make decisions around what sorts of health services they're going to need now and into the future. It's not a funding body; it's a consultative arrangement to help design and then forward that information into the clinical plans for the local health districts, so as they bring activity and resources on, they've got a very clear and signed-up plan with the community as to what they want to bring online.

DR CHANT: I'll give you probably an example of how that can happen in a macro level and then it happens at a local level. HIV has probably been a longstanding example where, at a peak level, we would have our New South Wales users group, NUAA, sitting down with us alongside our academic

partners in the Kirby, alongside ACON, Pos Life and other NGOs that are working in that sector and sitting down and looking at the data and what are the concerns, what are the gaps, what are the threats, and planning together - data informed, evidence informed, what are the innovations that are being used overseas, what is the new evidence that is emerging? And we have general practice, we have drug and alcohol, sexual health, representatives from our local health districts.

Those linkages will then play out differently but depending on the geography, the nature of the risks in particular areas, that will be a focus of activity of the local health district as well, but informed up and down from intelligence, because we recognise the importance of local intelligence as well as engaging statewide. But our partners have been critical at keeping us informed and grounded about what our services need to look like.

MR GLOVER: Thank you. In paragraph 64, something called a "whole of person integrated care model" is described. What does that mean?

MS WILLCOX: We talked briefly earlier around integrated care, and that is about providing care that is seamless for the person who is requiring the services so they can move between primary care, community services, hospital admission potentially, and each part of the system that they move through understands them, knows them, has information about them, allows that person to move through in a connected way.

Now, we know this is not perfect at the moment, you know, you ask any patient - "Mum, how many times did I have to describe my situation to any number of people?" - that is, when they enter the health system. But our aim is to mitigate these interface issues that happen between primary care and the state system so that we can join up our activities, certainly data sharing and medical records, models of care that show a continuation of care for a person, also in the vein of keeping them optimally well in the community and not requiring them to come into hospital, and you have a much greater chance of that if that care pathway for them is continuous and there is a sharing and understanding of their needs across all of the professions that may be caring for them in primary through to acute.

.28/11/2023 (002)

The interface, I think, with primary care, aged care, these are all the things that we are working around, and there are many things. I think some of them are captured in the submission that we may come to about how we can actually improve that and create true integration.

NSW Health has done a number of very good flagship integrations under Dr Lyons's leadership, but it is not a universal way of providing care as yet. It's still in targeted areas and taking considerable effort in order to create a setting that means a person can move seamlessly across care.

MR GLOVER: Why is it important for someone to be able to move seamlessly across care in the way you've described?

MS WILLCOX: I think, firstly, for the person the experience is better. They move from professional to professional and people know them and understand them. They can develop trust in their care providers. If you are changing practitioners constantly, there's a vulnerability there for you.

It's better for the clinicians who are providing the care because they're getting better information about a person, they're getting more informed information from the patient as well, so they're getting the total picture of what's going on with a person. It goes to some of those outcome and experience measures we talked to earlier. It will probably be more efficient in terms of a funding - you know, funding arrangements, because we're likely to actually manage somebody better in the community and make better decisions about when they might need to come to hospital. If it's fragmented, we end up being the default and --

THE COMMISSIONER: It's care that's for the whole of the person's health needs, or all of their health needs is integrated care, which might - we were talking about this at lunch - involve multidisciplinary care because a whole of a person's health needs might require different health professionals that have different areas of expertise.

MS WILLCOX: That's correct, Commissioner. And one of the things that, out of the Strengthening Medicare Taskforce that Dr Lyons was a participant on, the Commonwealth

Government has provided some funding to make it easier for general practice to employ nurses and allied health professionals within a practice. That goes to your point, because rarely does a person have one need; they will have multiple needs.

The patient reported experience measures and output measures that we talked about earlier are also important in that regard, because a patient will sometimes report themselves about just not feeling okay or feeling anxious. That may not be something that comes up in a dialogue in a clinic, but if it can be captured in those measures and a clinician's aware of it, that question may well be asked and additional supports provided to an individual.

THE COMMISSIONER: And you can have multidisciplinary care needs out of the hospital system, but integrated care might require treatment in a hospital for some acute part of your healthcare needs, but referral outside of the hospital system for assistance from a different healthcare professional for prevention or ameliorating the symptoms from what was the acute condition.

 MS WILLCOX: Yes, that's absolutely right. There would be some community settings - an outpatients clinic would be one area. People go to a pain clinic, for instance. There are many elements to pain. It may be a particular back issue or a nerve issue, there will be some psychosocial component, pain is a terribly distressing thing. Having a psychologist as well as a neurologist in that consultation may be more beneficial than a neurologist alone.

Is there anything you want to add?

DR LYONS: I'd just say I think this is the nub of where the system needs to change.

THE COMMISSIONER: Does this get back to where, perhaps, the funding models don't respond best to the kinds of care we've just discussed?

DR LYONS: In part, but I would add to that I think the success of the acute care system over the last 20 or 30 years has got us to the point where we've got deep knowledge around specialties, which are disease and system focused, primarily.

THE COMMISSIONER: And technically efficient care in hospitals.

DR LYONS: And technically very efficient. However, when you are a person who has multiple problems and are aged and frail, your needs may not be best met by just one of those specialties alone. You need access to a number of them for your holistic care and to get the best outcome.

I think the challenge for us is how we re-orient the system, because at the moment it's still very much geared up around - these specialties and sub-specialities are so important, they've given us the outcomes we now have which are great outcomes, and they're keeping people alive a lot longer than they would otherwise have been, but we now have this situation where their needs are not being met best by the way we are organising and delivering care. It's fragmented, it's siloed. Even within the acute care settings, it's a challenge to deliver holistic care, let alone transitioning outside, and how you support that change happening as a system is the issue that we are all grappling with, about how you support that change to occur, and particularly across the boundaries that exist between the state, the Commonwealth and other service providers.

DR CHANT: I think that's a really important segue, because the system that we have in Australia is premised on the general practitioner, who is a specialist - general practice is a specialty - who is the integrator. Then, technically, the other specialists, the non-GP specialists, have become so super specialised that we so much need that integrator to do that integrated care, and then in the absence of that strong grounding, our services are picking up some of that requirement to integrate. Technically, we should be integrating back to the primary care, this really strong --

THE COMMISSIONER: When you say "our services".

DR CHANT: I mean the services that NSW Health is providing.

Now, there will always be some circumstances where people are not in a stable condition to be dealt with and they may be hospitalised or they may require a lot more support than even a well-funded, well-integrated general

practice could do, and then again, that's a role for us.

So I really think that this has to be thought of in terms of, you know, our respective roles and responsibilities and to some extent, the integration and what that looks like for us depends on the partners we've got to integrate with. But ultimately, I think the majority of people would see a very strong primary health care sector, multidisciplinary, as the integrator, with us making sure we do our part in transferring medical records, that we link in, we give responsiveness to that primary care practitioner. But there are challenges, and I suppose we're operating in - that's part of the reason you have got this special commission.

THE COMMISSIONER: What you've all said today and just then has, in one way or another, been said in multiple reviews - everything we've been talking about.

DR LYONS: Yes.

THE COMMISSIONER: But we're here.

MS WILLCOX: We've used the term "workarounds", and I don't mean that in a pejorative sense, but some of the things that we've done at a state level have really been in a positive sense, "What are the workarounds we can do within the structures and the funding models that we exist in that are the best thing for patients?" So Kerry's point about how people with multiple chronic conditions, how they manage themselves, having a chronic care navigator is a service that a number of districts would do, and that enables someone to have a go-to person to help them work through where they need to be and help to manage themselves at home.

 We try to do all these things, because they're the right thing to do for a person. But just where the responsibility lies gets a little bit grey when you think about primary care and a public hospital setting.

 We're also doing some work with our PHNs, with our primary health network, our state group, and we've developed a joint statement, again under Dr Lyons's leadership, and got some agreement around some performance measures for particular groups of patients that we can both hold ourselves to account. Again it's an attempt to align

our efforts around people with chronic disease, like chronic heart failure, for example: what would be the measures that primary health would want to see and what would be the things we would want to see? Hopefully, collectively, we're all moving in the same direction for that particular patient group in a particular location. So we're just embarking on that work at the moment.

THE COMMISSIONER: But for the general practitioner specialists to be the integrators that Dr Chant said, that would require a reform to the MBS, wouldn't it, as to how there's funding for a general practitioner to go from fee for service and treating someone for a particular illness, as distinct from treating them for the condition they've got that might require not just a different model from the GP but integrated, multidisciplinary care as well? Is that generally --

DR LYONS: That's correct. That is generally correct. In fact, there are moves in that direction as a result of the some of the strengthening Medicare work. Voluntary patient registration to a practice is an example --

THE COMMISSIONER: Yes, that's what I had in mind.

DR LYONS: -- creating the relationship where a patient is seen to be --

THE COMMISSIONER: It doesn't matter where I look, either the camera is in the way or the microphone, so I'll just keep moving.

DR LYONS: The other component of that is ultimately that there will be funding to support the change in practice from the GP to be much more involved in the ongoing care that won't be linked, necessarily, to MBS. So those are the directions the Commonwealth has signalled through the changes. That needs to be built on and expanded.

THE COMMISSIONER: So this is - is it "VP" - voluntary patient enrolment?

DR LYONS: Voluntary patient registration, enrolment, yes.

 THE COMMISSIONER: Which, as I understand, the AMA is on board with, provided it doesn't move to capitation, but is actually just strengthening the bond of a particular

patient to a general practice, and then moving towards perhaps a better model of care for chronic disease.

DR LYONS: The next steps are going to be critically important because the enrolment alone is not going to give it --

THE COMMISSIONER: No.

DR LYONS: So it has to be what comes next and how that supports the changes we need to see.

But I would go beyond. I mean, I think we as a system need to value generalism and general practices especially much more than we currently have. We've valued our specialties and our sub-specialties, quite rightly, because they are very important to the sort of health system that we have and enjoy outcomes from, but generalism now, given the change in demographic of our community - ageing, frailty, multiple conditions, chronic conditions, the need for ongoing care - we must support generalism.

At the moment, we refer upstream to specialties, like that's a good thing for patients, and it is, but what we need to do is reorient the secondary care services back to primary care, so that they're actually supporting the general practitioner to deliver the care without need for referral, as much as possible, to maintain that holistic care and to have that ongoing relationship, rather than the fragmented, episodic arrangements that we have at the moment that rely on lots of information being transferred that isn't automatically transferred, and potential gaps in care.

DR CHANT: And it may go beyond primary care. It may be also the way that specialist services can take phone calls from GPs or can review results and things.

THE COMMISSIONER: Yes, we heard about that the day in a workshop.

 DR CHANT: Because we know also just even travelling to a specialist can be a barrier in terms of the time. Just thinking of it from the patient's perspective, where do they want to seek care, what's the best setting, what do we need to do if we're going to have primary care as the integrating practitioner, what else does that mean for the

changes around it, both our system, but also the specialist, the private specialist systems in terms of support for that general practice?

THE COMMISSIONER: An example of the topic you just raised, it would seem crazy - I have mild psoriasis, so if I go to my GP and my GP has recommended whatever, Diprosone, but it's not working very well and there is a different ointment or cream I could get. Under the current system, you need a referral to the specialist dermatologist, you have to go there, and they say, "Yes, your GP was right. Instead of potion A, you can have potion B"; whereas if the GP could have just called the specialist and said, "Beasley's been on potion A. Should we try potion B", the specialist says, "Yes", I don't have to go to the specialist.

DR CHANT: And they may also have telemedicine so he can actually visualise it, so it could be a very quick episode or it could be review the scan or review the test. So it's not all the time that it requires a full assessment by the specialist. It's a question of how do we put and value the specialist knowledge of the general practitioner as the integrator, and then what also can our services consistently do, so that if the general practitioner is working to their full scope, where will we be as a backstop if things go outside that boundary where they're feeling they need that referral and can we predictably support them?

THE COMMISSIONER: I should clarify, I don't intend to expose all my ailments.

MR GLOVER: Commissioner, it is 10 past 3. Might I suggest a short break, so our witnesses can have a short break and also our reporters.

THE COMMISSIONER: Would you like a short break?

MS WILLCOX: It is up to you. We're fine.

THE COMMISSIONER: You want one?

MR GLOVER: I do.

THE COMMISSIONER: We will have a break until 20 past.

MR GLOVER: Thank you.

SHORT ADJOURNMENT

THE COMMISSIONER: Yes, Mr Glover.

MR GLOVER: Thank you, Commissioner.

If we can go back to the report, please, and we'll go to paragraph 69. Reference is made there to hospitals operating at different levels, and we've had some evidence about those levels this morning, but also referred to is a "multipurpose service". What is a "multipurpose service"?

MS WILLCOX: Thank you. Yes, a multipurpose service, they're principally in our rural and regional communities and provide care, sub-acute care, and in the main, aged care in our rural and regional communities. They are staffed by local health district staff, GPs frequently come in and provide primary care, and they tend to be elderly, long-stay patients.

MR GLOVER: How are those funded in the Commonwealth-state sharing arrangement? Dr Lyons, everyone is looking at you.

 DR LYONS: By agreement, the multipurpose services have a contribution agreement for the healthcare side of things, but given that they also have responsibility to provide residential aged care, there's an agreement from the Commonwealth to fund the aged care beds as well through the aged care funding stream.

It's actually a very good solution for the rural communities because it allows the concentration of the health and aged care services. There will be an emergency department, which is providing after-hours medical care. You might have a couple of acute beds. You will have access to some community health services on site. You might have access to a dental chair in the MPS, so that visiting oral health services can be provided. So it's a very good solution to maintain a presence around the health and aged care services for that community.

MR GLOVER: And although they are providing aged and primary care, are they managed by the LHDs in which they sit for all of their services?

.28/11/2023 (002)

1 2

DR LYONS: They are, they are.

3 4

5

MR GLOVER:

Can we go to paragraph 72.

6 7 8 THE COMMISSIONER:

Sorry, can I just ask, are multipurpose services facilities widespread in New South Wales?

9 10 11

DR LYONS: I think New South Wales has the largest concentration of multipurpose services in the country. Most of our small community rural hospitals have been converted to multipurpose services over the years.

MS WILLCOX: I don't know the exact figure off the top of my head. I thought it was 30 to 40, but we could confirm that.

MR GLOVER: Over at paragraphs 70 and 71 leading into 72, there's discussion about the network arrangements, which we have spoken about already. Then in 72, as part of those networked arrangements, it is said in the last sentence:

Some elements of care may be provided with network support, including through virtual care arrangements.

Can you just describe what is being referred to there?

Yes. MS WILLCOX: So the networked arrangements would assist clinicians in determining what might be an appropriate treatment response to a patient in their care and whether they needed to be transferred to a high-level setting. A critical care patient or a small child would be an example of that.

Increasingly, we have service models that enable a clinician at one particular location to be hooked up with a camera, video and sound to a clinician at another location to make an assessment - paediatrics, our neonatal service is a really good example of that, where the neonatal intensive care service people are able to have that discussion, observe a child, get an account of its condition and jointly make a decision with the clinician locally as to whether that little one needs to be transferred to a higher acuity setting. So that would be the type of example.

MR GLOVER: Is another example the arrangement between, I think you said, Broken Hill and RPA this morning; is that another example?

MS WILLCOX: Yes, it is. The Broken Hill community is obviously a very long way away, Adelaide is the nearest large and tertiary facility. There are some natural connections between Western NSW and RPA, it's really an extension of that. It's about obviously giving that immediate support to a clinician and giving guidance around a patient, but it also goes to building capability in an educative role as well for those clinicians.

 MR GLOVER: Just referring to the fact that for Broken Hill, the closest major city is Adelaide, are there some arrangements between New South Wales and other states for those types of communities?

MS WILLCOX: There would be a number of patients from Broken Hill that would travel to Adelaide for planned care, in the main. We have cross-border arrangements with Albury, and the ACT. They have formal cross-jurisdictional arrangements, where activity and flow of residents moving between the two is accounted for, again through the IHACPA model as well, and a reconciliation done at the end of each year to clarify that activity and monitor the flows and a payment schedule arranged.

MR GLOVER: Is the purpose of those arrangements to ensure that residents in those communities can access the care that they need in a seamless way?

MS WILLCOX: Yes, that is exactly the reason. Again, the matter of the dotted line around the boundary is not relevant to a person. They want to go and access care which is the closest or the place that is most appropriate, and our job is to facilitate.

MR GLOVER: Can we go to paragraph 75, please. There it is stated that:

Community health services aim to ensure adequate short or long term clinical care and direct efforts towards addressing the social and environmental determinants of health.

 What are the social and environmental determinants of health?

MS WILLCOX: I will ask Dr Chant to make some comment on this as well, but just some initial remarks. If we look at mental health patients, for instance, mental health consumers, there will often be a complexity of social and environmental impacts - housing, family support, dietary issues impacted by the medications they may be on for their chronic mental health issues. When you come into a mental health community service for care, our aim is to look at all of you and to provide nutrition and dietary support, as well as managing your mental health issues and managing your medications, ensuring your housing support is adequate.

When community mental health staff go into people's homes, they can scan the environment and see if someone is coping and functioning in their place. These bring a total picture of what a person's situation is like and it may lead, for instance, to a community health nurse making contact through the service to our housing partners or to the Department of Communities and Justice, wherever we'd need to go to ensure that we get the wrap-around around that individual that they require. It might just be sort of a sub-case study of the nature of what that language is they'll need to explain.

DR CHANT: I'm going to draw from the AIHW's discussion of social determinants because I think that's quite useful. There is clear evidence that supports the close relationship between people's health and wellbeing and the living and working conditions which form part of their social environment. Factors such as socioeconomic position, their education, conditions of employment, power and social support, social connection, known collectively as the social determinants of health, act together to either strengthen or undermine the health of individuals.

 We can see that we can turn that into a positive, that if you have social connection, you're not socially isolated, then that's going to improve your outcomes. Even if you experience the same disease, perhaps, as someone who is potentially suffering social isolation, the challenges for you getting the same outcomes will be different and the care we'll need to provide will have to attend to that social isolation.

play out. Australia has quite an equitable health system, but we know there are still, across all our data sources, gaps between the most advantaged in our population and the most disadvantaged, and that derives from those social determinants of health.

MR GLOVER: Aside from social isolation, how in other ways

All the data demonstrates that the social determinants

MR GLOVER: Aside from social isolation, how in other ways do they play out?

DR CHANT: Perhaps if we talk about socioeconomic circumstances. I think in the submission we draw attention to the differences between the most advantaged in our population and the most disadvantaged.

Just perhaps thinking about yourself, if you're having to make a decision about expending or accessing health services, you might delay that if you've got a job where you might be in insecure employment and if you take a day off work you might be seen negatively. You might be able to get a day off work but then you might be on a very, very low income or you might have other demands on your disposable income and you don't have access to a bulk-billing GP, that's a barrier. You might say "I'll get better. I'll delay."

You may particularly not attend to preventative treatment to go to those prevention health checks because you might see that as discretionary. Even when you get to the specialist, you might access a bulk-billing general practitioner. But then if that bulk-billing general practitioner sends you to a private specialist, the majority of private specialists, are associated with out of pocket expenses, they're not covered fully by Medicare. You may express that view to your GP but you may feel uncomfortable saying to your GP that you can't afford to go to the specialist, and so the GP may not know you've gone there. So that's an example.

The GP could provide you to outpatients, but again, our outpatient services perhaps have waits associated with them and prioritisation; they may not be as convenient as a local specialist.

Then when you even get to your treatment, then there's a question of will you take the time off work, can you

afford any out of pocket expenses, can you get transport to those services that you need?

I've just given a sort of characterisation of someone's flow through the system, but you can see how that would be a different perspective. If you're very advantaged, you have secure employment, you have high disposable income, no other factors in play, your navigation of that pathway will be a lot more streamlined and not impacted by so many decision points that are impacting on your ability to access care.

DR LYONS: I will give you a very simple illustrative example. It was a patient with long-term chronic respiratory condition, frequent readmissions to hospital. When the community health team went out to where that person was living, they found that they were living in a caravan with a leak that was wetting the carpets and creating a mouldy environment. So when the person was being sent home - that was where they were going to - their chronic respiratory condition was being exacerbated and leading to readmission.

These are the sorts of things that are really important to get to the nub of because they have a big impact on an individual's outcome and that's why community health and those sorts of visits are important.

MR GLOVER: And what about cultural or language diversity; is that another factor?

DR CHANT: Yes. Cultural and linguistic diversity presents challenges, and we should actually say it's the responsibility of our services to meet these challenges. When we use terms like "health literacy", that can almost be saying there is a problem for individuals. It is really a problem for our services in making sure that we community in a way that is accessible and understood.

Clearly there are going to be issues of language barriers if English is not your first language. Do you have access to a doctor that speaks your language? There may be barriers. We have translator services, there are funded translator services, but again they might be timely or awkward, you might feel uncomfortable asking.

There's also potential interplay between culturally

and linguistically diverse communities, and perhaps newly arrived migrants may not have secure employment or housing. Again, it's not culturally and linguistically diverse people alone, people come with many different challenges, but you can see how language can be a barrier to accessing care if you cannot read or write, and even read our forms. Do we put things in multiple languages? Do we do it in very simple language?

I think through COVID we've really learnt about how to work in partnership with CALD communities to make sure that the resources we've developed are more tailored to their needs, which may be videos, doctors from culturally and linguistically diverse communities talking in language as trusted providers of information.

I think the responsibility on us is to do better, but that gives an example of how we actually have to work a little harder and really do that co-design with communities to make sure our resources help people navigate, where English is not the first language.

MR GLOVER: Some of the responses that you've just described, and particularly in terms of how services are delivered, are within the remit of NSW Health, but do other responses to the social determinants of health require a cross-government response?

DR CHANT: Absolutely.

MS WILLCOX: Thank you for your question, because I was going to raise The First 2000 Days Framework, because, I guess it is one of the things from a policy perspective that really brings the social environmental determinants matter really to the top. There is an incredible amount of evidence around the adverse childhood events and the prenatal and antenatal period of a little one's life and what there can be as a predictor in terms of their future health, education and their socioeconomic wellbeing.

 So the First 2000 Days is something that has been primarily generated out of health, but we partner with the Department of Education in particular around early childhood checks of little ones at around 4 years old. It's around a universal screening to try to identify where a little one may have some speech or motor issues or concentration issues and about an earlier intervention,

which may be as simple as play therapy, it doesn't necessarily mean some significant intervention, but it's again part of antenatal care, optimising that pregnancy for a woman in terms of their diet, not smoking, alcohol, a safe stress-free environment to the extent it can be - we know stress in an unborn child has an impact on their long-term prospects - looking after that woman through the entire pregnancy, the delivery, and then the postnatal care of her and her little one is something that we are very - this piece of policy work is really driving a whole lot of work across the system.

Now, much of what is being done, for instance, in maternity services, fits neatly into First 2000 Days. The system has always been well geared in terms of caring for women pre, during and post, but I think The First 2000 Days really gives a strong evidence base for these additional interventions and services and how we think about an unborn child right through to them being five years of age and how we can really change the course of their life if we get this right. So there has been great cross-government support and investment on this.

DR CHANT: I suppose more broadly, the World Health Organization has recognised that for countries to address health outcomes at this broad-based policy construct across government is so critical, be that building transport infrastructure to make sure that people have access to health care, but also employment opportunities, access to the high-quality education is critical to long-term outcomes, housing affordability.

All of these factors require not health alone; it's very much a whole of government setting, but they are very important if we are actually to reduce inequity of outcomes at a population level or enjoy the benefits of the health gains that new technology and preventative health can afford us.

MR GLOVER: And how can NSW Health influence those matters in other areas like transport and planning?

 DR CHANT: I'll give you some examples. So probably at a macro level, health has advocated, over history, for particular changes in the planning Act to recognise the importance of health outcomes as a planning outcome itself, health and wellbeing, as a desirable outcome of any

planning; work with treasury to value the aspects like physical activity and mental wellbeing around accessible and built environments or in terms of assessments of transport corridors, valuing the ability for incidental exercise. As a population health practitioner, I very much like people catching trains and buses or riding to work or walking because it actually gives them incidental exercise. So factoring in some of those benefits to health from those transport corridors or making things more walkable or rideable, we've been working with treasury about some tools that give us better value in future gains in that regard.

Our local health districts work - there has been some great innovative work, working in partnership with some of the builders of apartment blocks about how you build an apartment block that really promotes physical activity and social cohesion and then trying to look at how that can be used as a bit of a template.

Active playgrounds - there's a lot of science to go into how do you make a playground that promotes kids to be active and appealing. We've actually worked with the University of New South Wales on a whole planning toolkit which goes through things like how do you make spaces active and safe and used, and that's around safety and security and making sure that you've got good lighting, design principles.

There's a lot of work that health does in partnership with other government agencies to really get that recognition of the importance of how spaces can really promote social cohesion, social gathering, but also physical activity, and all of those things are so important to overall health of the community.

MR GLOVER: How effective is that collaboration in actually getting the outcomes that would see improvements in these areas?

 DR CHANT: Look, I think it's complex, it's always challenging. But I think that health has taken up a number of opportunities. Clearly this is an area that we need to work at, at a state level, but also our local health districts have great partnerships with local council as well, and creating those play-spaced strategies. I think you will hear from a number of our local health districts around partnerships that they've developed with communities

and local council about how they've really changed the nature of some of the environments to really promote health and wellbeing.

THE COMMISSIONER: The First 2000 Days program - that started in 2020; is that right? It's a five-year program.

MS WILLCOX: Yes.

THE COMMISSIONER: Is that entirely funded by New South Wales?

MS WILLCOX: Yes, by New South Wales Government, including education and health.

THE COMMISSIONER: So there's no Commonwealth fund into that program?

MS WILLCOX: No.

THE COMMISSIONER: There is a free health and development check at four years for kids at preschools, is it?

MS WILLCOX: That's right, Commissioner. We're in the process of rolling that out across the state. It's currently in six local health districts, Illawarra, South Eastern, South Western, Mid North Coast and Northern NSW..

THE COMMISSIONER: And there is an evaluation process going on at the moment, is there, as well

MS WILLCOX: There is, and part of the funding commitment around that is actually obviously to have very strong monitoring and evaluation to show that the work that we're actually doing is actually bringing about what is intended to do. I mean, much of it will be on a longer time frame, but we're identifying kids who need some additional support and we're able to divert them into those appropriate services, and as I said, some might be very low key and other children may need some more specialist speech therapy support, for instance.

THE COMMISSIONER: What prompted me to ask that was there is a submission that is probably on the website, I imagine, from Minderoo, which I've associated more with early education, but they're linked, obviously, health and --

 DR CHANT: Yes. I suppose just that there is strong evidence that access to early childhood education, preschool access, is very strong. So even when we are looking at working with our families, we would see that as almost a co-enabler to good outcomes, where securing supported family play groups or early childhood education or child care is a really good component to strengthening the nature of the intervention to support the family, to support the outcomes.

THE COMMISSIONER: This is ground zero for prevention, right?

DR CHANT: This is the area where you get the quickest return on investment because of the importance, yes.

THE COMMISSIONER: Minderoo does congratulate the New South Wales Government for this program, although I think their submission wants the checks even younger. But the child digital health record - is that the old blue book that we used to get?

MS WILLCOX: That's correct.

THE COMMISSIONER: So it is being digitised?

MS WILLCOX: Just so that it is easier for access. Instead of carrying the book around in the bag, you have an app on your telephone and you can keep up to date with your records and, yes, it is just a more convenient way for a mother, in the main, to access it.

THE COMMISSIONER: Is that a New South Wales program or a Commonwealth program?

MS WILLCOX: It's New South Wales.

THE COMMISSIONER: That's New South Wales too?

MS WILLCOX: Yes.

 Σ THE COMMISSIONER: Thanks.

MS WILLCOX: Just on The First 2000 Days, if I might add, in terms of some of the background evidence work that was done as the framework and policy was developed, for every dollar invested, they indicate it's somewhere around a \$13

return. If we do early intervention, the forecasts say that over \$15 billion a year could be saved in sort of more high intensity interventions that a young one might want. Certainly, as Dr Chant indicated, those early predictors of adverse child events can actually predict if a person is going to have heart disease perhaps in their 50s, so it's --

THE COMMISSIONER: Even though you are evaluating it, all of the evidence about this is well known and well established and highly reliable.

DR WILLCOX: It would be about validating.

DR LYONS: Very strong.

DR CHANT: I suppose it's also important to recognise that general practice also has a key role in early childhood development. Just as an example, we have high rates of coverage of childhood vaccinations, up around 94 per cent, and the vast majority of that is done by general practice for our under 5s. It means that children are actually going to our general practitioners many times, and so again, the role of general practice with their nurses and other things in this space is also important to complement the work that our services do in that more sustained home visiting and support for families. Again, it highlights the complementariness of the services, and I suppose it is how we design the services to be complementary and maximise the focus of each of the services.

THE COMMISSIONER: Yes.

MR GLOVER: Dr Lyons, did you have anything to add to that general topic?

DR LYONS: Nothing more, thanks, no.

MR GLOVER: Can we go to paragraph 76, please. There, it's said that:

Services are focused on specific population groups and/or a combination of health issues.

What is meant by that phrase?

MS WILLCOX: The phrase intends to outline in our community health centres, of which a local district may have a number of community health centres, there will be a different collection of services potentially at any one of those services. One might provide dental and child and family, others might do some aged care, some public health services, so they will be developed and designed in order to meet the needs of their population, based on that service planning that we discussed earlier.

For some specific population groups, if we talk to refugee health, there is, for instance, a large Tibetan community up in the Northern Beaches at Dee Why, the community health service up there has a very strong refugee service there to attend to that community and to encourage the community to connect with the system. So in our culturally and linguistically diverse communities, you will find pockets of activity and community health services across the state to serve the needs of their specific populations.

MR GLOVER: Is that one of the benefits of devolved planning within the districts?

MS WILLCOX: Yes, definitely. I think clearly having that macro level to understand population movements and how it's playing out across the state is obviously valuable, but ultimately, it's our local health districts who will be connecting most closely with those communities, and appropriately so, and in partnership with those communities, designing the types of services their communities may need because there will be variation amongst different population groups of what some of the more predominant health needs may be.

THE COMMISSIONER: It's linked to the discussion that you had about social determinants and health?

MS WILLCOX: Yes.

THE COMMISSIONER: And the example Dr Chant gave about TB?

MS WILLCOX: That's exactly right, yes. There may be some more sort of trauma-informed care for some communities, particularly our refugee communities, so there are particular skills that our staff require. On trauma informed, as an example, we have a trauma-informed policy

and a framework that helps to guide and support staff dealing with communities that have experienced trauma, and that may not just be refugees, it can be all manner of individuals - domestic violence, child abuse --

THE COMMISSIONER: Natural disasters.

MS WILLCOX: Natural disasters, yes. More and more, unfortunately, all of our clinicians need to be well versed in this.

MR GLOVER: Dr Chant, do you have something to add?

DR CHANT: I know you are interested in how our districts work across boundaries --

MR GLOVER: Yes.

 DR CHANT: -- and I just wanted to assure you that there are examples we can also provide about how we recognise that culturally and linguistically diverse communities don't adhere to the boundaries, but there has been some great work across South Western Sydney and Western Sydney local health districts with the Pasifika community, working on diabetes and other health promotions. So we can give you some examples that highlight how our local health districts collaborate where they have communities of interest with those shared networks.

 MR GLOVER: I take it that collaboration is important, firstly to ensure that the appropriate services are being delivered to the community that needs them; correct?

 DR CHANT: That's right, but also by having that engagement, when new and emerging issues arise, we know how to engage and what is the appropriate mechanism and what is acceptable to the community, and that really speeds up our response. If we've got new and emerging threats or new issues we want to bring to the community, we already have established trusted partners and we've got trust with that community. I think we need to do that. That's one of the strengths of our devolved structure.

 MS WILLCOX: And they teach us to be culturally informed because communities have different features around how they interact and what's important and culturally relevant to them, and they teach us and help us so that we make sure

those services are informed, and that means they'll come to us and trust us.

MR GLOVER: That collaboration across districts where the community may be spread presumably also leads to efficiencies in the delivery of that care to that community?

DR CHANT: That's right, and the engagement. So rather than developing resources or products or care pathways twice, they can be developed collaboratively. So, yes, our districts themselves will recognise where there are shared interests across our boundaries and work together.

MR GLOVER: If we go to paragraph 78, there reference is made to strategies employed by NSW Health that foster communication and connectivity across primary hospital and community health care providers. We've spoken earlier today about some of the challenges that the fragmentation of the healthcare system provides. What are the strategies being referred to in that paragraph.

MS WILLCOX: Thank you. There are a number, and some we have touched on, as you said.

 One important part of connectivity is information. Having integrated patient records across sectors would be highly useful in terms of that patient experience and safer care as people move between different parts of the health system.

 In NSW Health we have developed the Lumos system and had significant traction with the Commonwealth on this and working with them to see if the Lumos model can be expanded across the country.

 Whilst it is not real-time on a particular person, it gathers information to understand the patterns of movement of people and their care journeys to help us better design services.

 We are, as you know, implementing the single digital patient record over the next few years. Having one medical record platform across the state will give us much stronger integration of patient information. People will be able to move across local health district lines, knowing that their information will follow them, it won't require a phone call

or a faxing of information or a scanning of documents, so that is both safer for patient care and more efficient and probably a better experience for our patients as well.

Interfacing single digital patient record with primary care systems is the next level. I think about two or three information systems are used principally in primary care, and we would look to see how we might manage and interface there. There is My Health Record at the moment, but it is a static uploading of a document. It is not a real-time, integrated --

THE COMMISSIONER: That interface with GPs you just discussed, that presumably is going to be looked at after the single digital patient record is rolled out, or at the same time?

MS WILLCOX: We will attempt to have a look at it as we roll out, because if we can do that as we --

THE COMMISSIONER: Does that include when it gets rolled out in Hunter New England as the first LHD?

MS WILLCOX: Yes.

 THE COMMISSIONER: It might just also help if one of you put on the record what the difference is between what Lumos offers and what the single digital patient record will offer. I don't care who.

DR LYONS: I can do that.

MS WILLCOX: Nigel is part of the architects of Lumos, so I'll get him to do that.

DR LYONS: Lumos is actually an after-the-event capture of data from the systems that looks at the patterns of service delivery and care across the GP practice and the conditions that the patient had in the GP practice, and then links with our ED datasets, our inpatient datasets, our ambulance service, births, deaths; it looks at mortality linkages. It shows what happens to patients that are seen frequently in general practice and the patterns that follow from that; patients who very rarely go and the patterns that follow from that.

It is done every six months and provides a report back

to the general practitioners around their patient group and can give them really useful information around do their patients attend EDs regularly, how does that compare with another general practice like theirs in another place. It just gives that information around service delivery patterns and benchmarking around their outcomes for their patient cohort. So it is useful information around whole of system, but being fed back to the GP primary care providers.

MS WILLCOX: Commissioner, the single digital patient record that goes to the medical record that belongs to an individual, currently we have, how many systems? Four?

DR CHANT: Eight domains, so --

THE COMMISSIONER: I thought it was six.

DR CHANT: Six or eight.

MS WILLCOX: Something of that order. Suffice to say, multiple domains, so information can't pass between each of them. If a person accesses care in one local health district and then goes on holidays down to Batemans Bay, has a fall, becomes unconscious and lands in Batemans Bay Hospital, their medical record will not follow them or the clinician down there won't be able to access it, so you can see the sort of clinical risk potentially that that creates.

This will give us one platform, one system. A person moves around, everyone can access it. As I mentioned, it will obviously be much better for the patient. That constant restating, if they are in a position to do so, of their situation and getting multiple questions, they'll be relieved of some of that. It will give some access to real-time measures.

 It will be stronger in that the operability will allow us to, I think, access data more easily from across the system for both clinical service planning but also research. You can imagine the inputs that could be derived from one platform of gathering medical information from across the system, obviously de-identified.

So this will be a rolling program over the next four to five years. And as you're obviously aware, Hunter New England is going first. It really is a clinical transformation, not an IT system rollout, and we're just settling on our statewide governance, which obviously can include a large number of our clinical teams, to assist with that and for us to support them as we roll it out.

Epic is the vendor that has been selected and most of the modules have been constructed so we won't be having a whole lot of boutique systems, but there will be a work flow and change management and some bespoke things that our system will require, but in the main the modules come in the one system that is known as Epic.

MR GLOVER: I'm going to move to a different topic now, Commissioner. Is that a convenient time?

THE COMMISSIONER: It is. Thank you all for your time today, and we will adjourn until 10am tomorrow.

MR GLOVER: Thank you.

AT 3.59PM THE SPECIAL COMMISSION OF INQUIRY WAS ADJOURNED TO WEDNESDAY, 29 NOVEMBER 2023 AT 10AM

139:9, 163:39, 167:10, 181:30, 185:27 recover _[1] - 158:21 recovery _[2] - 158:12, 158:18 recruit _[3] - 140:40, 143:4, 145:13 recurrent _[1] - 93:8 redesign _[3] - 88:43, 111:31, 113:41 reduce _[5] - 94:17,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] -	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] -	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] -	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] -	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] -
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6, 94:24, 98:32,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37, 115:5, 124:43,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17, 69:18, 69:19, 75:17,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23 report [35] - 67:19,	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5, 146:14, 166:35
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6, 94:24, 98:32, 102:10, 106:40,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37, 115:5, 124:43, 125:10, 126:5,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17, 69:18, 69:19, 75:17, 92:18, 93:36, 94:31,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23 report [35] - 67:19, 67:38, 67:41, 68:8,	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5, 146:14, 166:35 requirements [2] -
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6, 94:24, 98:32, 102:10, 106:40, 112:44, 118:46,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37, 115:5, 124:43, 125:10, 126:5, 136:7, 136:33,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17, 69:18, 69:19, 75:17, 92:18, 93:36, 94:31, 98:17, 98:27,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23 report [35] - 67:19, 67:38, 67:41, 68:8, 68:12, 68:38, 73:43,	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5, 146:14, 166:35 requirements [2] - 74:29, 142:35
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6, 94:24, 98:32, 102:10, 106:40, 112:44, 118:46, 123:2, 125:4,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37, 115:5, 124:43, 125:10, 126:5,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17, 69:18, 69:19, 75:17, 92:18, 93:36, 94:31, 98:17, 98:27, 100:25, 104:17,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23 report [35] - 67:19, 67:38, 67:41, 68:8, 68:12, 68:38, 73:43, 74:13, 80:29, 82:40, 83:4, 84:37, 86:1,	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5, 146:14, 166:35 requirements [2] - 74:29, 142:35 requires [3] - 83:23,
139:9, 163:39, 167:10, 181:30, 185:27 recover [1] - 158:21 recovery [2] - 158:12, 158:18 recruit [3] - 140:40, 143:4, 145:13 recurrent [1] - 93:8 redesign [3] - 88:43, 111:31, 113:41 reduce [5] - 94:17, 94:19, 147:39, 148:6, 178:35 reduced [1] - 148:8 reducing [1] - 155:47 refer [1] - 169:23 reference [27] - 68:17, 68:40, 69:29, 74:15, 74:20, 75:5, 75:45, 80:33, 84:38, 85:10, 86:1, 87:7, 90:6, 94:24, 98:32, 102:10, 106:40, 112:44, 118:46, 123:2, 125:4, 131:46, 140:16,	138:43, 145:31, 148:23, 148:41, 148:44, 151:40, 151:46, 154:45 reflected [13] - 76:27, 76:29, 81:26, 81:47, 108:3, 115:36, 116:29, 128:26, 128:47, 129:4, 134:32, 143:32, 144:41 reflecting [5] - 76:26, 92:9, 114:42, 115:10, 144:47 reflection [8] - 76:6, 82:31, 97:34, 115:13, 115:39, 129:31, 151:16, 154:39 reflective [4] - 116:43, 120:44, 132:8, 134:10 reflects [10] - 72:38, 73:44, 114:37, 115:5, 124:43, 125:10, 126:5, 136:7, 136:33,	139:5 regularly [1] - 187:3 Rehab [3] - 80:15, 80:18, 80:21 rehabilitation [1] - 134:39 reinforce [1] - 128:19 rejected [1] - 126:36 relate [4] - 96:27, 125:42, 143:45, 147:3 related [9] - 96:44, 118:34, 119:40, 124:40, 126:6, 136:2, 143:2, 145:19, 160:33 relates [6] - 79:6, 93:39, 105:32, 105:41, 128:7, 136:42 relating [1] - 124:2 relation [20] - 69:17, 69:18, 69:19, 75:17, 92:18, 93:36, 94:31, 98:17, 98:27, 100:25, 104:17, 107:47, 110:45,	156:3 relieved [1] - 187:36 rely [1] - 169:31 remains [1] - 140:44 remarks [1] - 174:5 remember [1] - 144:13 remit [6] - 66:33, 72:4, 72:15, 92:5, 110:43, 177:25 remote [3] - 72:22, 72:45, 140:34 remoteness [1] - 151:36 renovated [1] - 109:7 reorient [1] - 169:25 replacement [3] - 93:17, 99:13, 125:15 replacements [2] - 99:25, 99:26 replicate [1] - 82:13 replicated [1] - 149:28 REPORT [1] - 68:23 report [35] - 67:19, 67:38, 67:41, 68:8, 68:12, 68:38, 73:43, 74:13, 80:29, 82:40,	102:7, 102:21, 102:26, 102:33, 104:15, 105:4, 113:17, 128:38, 158:14, 158:39, 158:40, 158:43, 161:26, 164:42, 165:18, 166:46, 168:11, 168:15, 174:25, 177:26, 178:33, 183:46, 185:47, 188:11 required [16] - 71:4, 74:39, 77:24, 77:25, 79:31, 99:46, 101:30, 102:6, 104:21, 133:36, 135:47, 138:35, 140:3, 150:28, 158:9, 158:10 requirement [8] - 103:45, 121:14, 126:26, 135:29, 145:46, 146:5, 146:14, 166:35 requirements [2] - 74:29, 142:35
